Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

Autumn Schuler

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Teace Noel

Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Please, consider that the visitors to your area are deeply concerned about the effects of the comprehensive plan and it's environmental influence on a vast area, all the way to the Chesapeake Bay. Thank You in advance for your foresight!

Sincerely,

Elisabeth Langendorf

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Besides what is below....VOTE NOOOOOOOOOOOOOOOOOOOOOOOOOOOOO.

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the

health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it.

Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Miranda Palladino

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Ellen Hoffman

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Molly Nathanson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Caroline Mackall

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The comprehensive plan of Ranson is clear: it states, "the City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." This land is ill-suited for an industrial facility due to its location and hydrogeology. Further, the industry that this zoning change will allow for will adversely affect the health, safety, and welfare of the community through its affect on the agricultural industry.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the

bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer. In this way, this zoning change will adversely affect the welfare of the community.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas

states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for. This land is clearly ill-suited for industrial use and should not be zoned for it.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Katherine Hutson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional stress and uncertainty into children's lives. Households living in areas affected by particulate

matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." This zoning change would clearly adversely affect the health, safety, and welfare of the community. Children face increased exposure to air pollution adversely affecting their health, financial instability adversely affecting their welfare, groundwater contamination adversely affecting their safety, and environmental injustice and discrimination if ordinance #2017-302 is passed. Educators will face increased air pollution adversely affecting their health and consequently welfare. These adverse effects are all against Ranson's Comprehensive Plan. Please vote NO on Ordinance #2017-302.

Sincerely,

Nancy Hubert

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

Susan Whitmire

matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." This zoning change would clearly adversely affect the health, safety, and welfare of the community. Children face increased exposure to air pollution adversely affecting their health, financial instability adversely affecting their welfare, groundwater contamination adversely affecting their safety, and environmental injustice and discrimination if ordinance #2017-302 is passed. Educators will face increased air pollution adversely affecting their health and consequently welfare. These adverse effects are all against Ranson's Comprehensive Plan. Please vote NO on Ordinance #2017-302.

As a high school teacher, I am extremely concerned about this issues of equity and environmental injustice. Also, my daughter lives in Bakerton, which is not very far from the proposed Rockwool sight. If the air and water quality is ruined by Rockwool, the value of her property will also be ruined. She has worked hard as a public librarian to purchase a home and I do not want to see her property become devalued or worse due to the building of an industrial plant close to her home.

Sincerely,

Katherine Hutson

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

As an Earth Science teacher and 25 year resident of Shepherdstown who has well water, I am urging you to take into consideration the karst topography of this region and make the right choices for the quality of life for residents of the Eastern Panhandle of WV. Please don't destroy what we have here!

Sincerely,

Katherine Hutson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

Krista Powell

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

I've lived in this area my entire life, and seeing the incredible improvements of Jefferson County is inspiring. Downtown Charles Town becomes more popular each year, filled with historical significance as well as trendy dining and shopping options. I love showing off our little town to visitors.

I am also a Race Director for multiple races, including one of the largest in West Virginia. These events bringing in thousands of visitors each year, and support local and small businesses. Mass industrialization will only hurt our rural community.

Tourism is far more valuable to the success of not only our county, but our state. Please don't ruin our community.

Sincerely,

Katie Thompson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

Kristine Mumaw

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Roderick Nussey

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

Nancy Hubert

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Jason Brier

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Nellie Davis

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

Victoria Bokum

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Neva Clayton

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Why would Jefferson County or the State of West Virginia want to destroy this historic area, that people from the surrounding States move to for tranquility, less traffic, to enjoy the great outdoors, along with incredible architecture and history? This county with it's Casino, Race Track, Entertainment Center along with all the other activities does very well compared to the other Counties in this State. If the Governor is looking for an area to destroy, why not do it in his backyard, say Greenbrier area?

I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on the wastewater treatment systems, burden the rate payers and risk surface waterways in Charles Town, risking the health, safety and welfare of the community. The comprehensive plan of Ranson states, the City "will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." Therefore, please vote NO on #2017-302.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically

higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant. Furthermore, the corrosive nature of chloride can cause damage to pipes both in the wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system. Through these effects, the industry this zoning will provide for will adversely effect the health, safety, and welfare of the community.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wildlife. Through these effects, the industry this zoning would allow will adversely effect the health, safety, and welfare of our community. This is being done without representation of those it will affect the most. Please vote No on Ordinance #2017-302.

Sincerely,

Jane Zinstein

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

William Walls

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Nancy Burress

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

Lisa Boyer

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Brittany McDonough

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

PLEASE listen to the voices of the people who live on and thrive off of this land. I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on the wastewater treatment systems, burden the rate payers and risk surface waterways in Charles Town, risking the health, safety and welfare of the community. The comprehensive plan of Ranson states, the City "will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." Therefore, please vote NO on #2017-302.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and

beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant. Furthermore, the corrosive nature of chloride can cause damage to pipes both in the wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system. Through these effects, the industry this zoning will provide for will adversely effect the health, safety, and welfare of the community.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the

proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wild life. Through these effects, the industry this zoning would allow will adversely effect the health, safety, and welfare of our community. This is being done with out representation of those it will affect the most. Please vote No on Ordinance #2017-302.

Sincerely,

Katy Davis

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

It is so important to listen to the voices of residents who are directly impacted by decisions such as these. I IMPLY you to read this information and hear the many who oppose this rezoning, including me, a resident and voter in Northern Virginia.

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Kathryn Davis

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Marian Willauer

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Ranson should not be annexing property which clearly is within county property limits. It's too far from Ranson to make sense.

Also, Ranson's plans for the property do not comply with the long term county planning and aren't right for the county. If Ranson wants to put in a Rockwool plant in the existing Ranson perimeter, then so be it. That should be up to Ranson residents to have a say. But don't subject nearby county residents to this crazy planning tactic.

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects

have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on the wastewater treatment systems, burden the rate payers and risk surface waterways in Charles Town, risking the health, safety and welfare of the community. The comprehensive plan of Ranson states, the City "will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." Therefore, please vote NO on #2017-302.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and

beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant. Furthermore, the corrosive nature of chloride can cause damage to pipes both in the wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system. Through these effects, the industry this zoning will provide for will adversely effect the health, safety, and welfare of the community.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the

proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wild life. Through these effects, the industry this zoning would allow will adversely effect the health, safety, and welfare of our community. This is being done with out representation of those it will affect the most. Please vote No on Ordinance #2017-302.

Sincerely,

John Rector

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in West Virginia and neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. In this way, this zoning change and the industry it will provide for will adversely affect the welfare

of the community. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents and West Virginia residents alike.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland and West Virginia. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

all of these problems mentioned would have profound effect on generations to come in both Maryland and West Virginia because of particulate matter which puts residents in both states at higher risk of asthma, cancer, diabetes, mental health issues, cardiovascular disease and Alzheimer's. all of which would put a strain on both states health systems, So I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in your own and neighboring states.

Sincerely,

James Lehman

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

OUR CHILDRENS HEALTH, OUR ENVIRONMENT AND THE TOUURISM DOLLARS THAT ARE BROUGHT IN BY OUR NATURAL AND HISTORICAL ENVIRONMENT ARE UNDER THREAT.

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Susan Womeldorf, MD
Shepherdstown, 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County. Heavy industrial use is incompatible with residential and institutional land use. The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Although the county doesn't appear to be held to environmental justice regulations, I do think the county needs to consider that the location will be harming students and residents particularly disadvantaged by race and/or income. West Virginia has always had a legacy of short selling our health and natural resources to stimulate the economy only to find later the associated health costs are considerable and can be more than the perceived economic gain.

As someone who lives within three miles of the proposed facility and purchases all of our food within five miles of the facility, I do also have significant concerns about the adequacy of the risk assessment and the additional cancer and non cancer risks that my family will ensure as a result of the proposed heavy industry.

Please vote no.

Thank you for your consideration.

Sincerely,

Heather Thorn

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Carolyn Thomas

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

Kelly Dougherty

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The comprehensive plan of Ranson is clear: it states, "the City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." This land is ill-suited for an industrial facility due to its location and hydrogeology. Further, the industry that this zoning change will allow for will adversely affect the health, safety, and welfare of the community through its affect on the agricultural industry.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the

bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer. In this way, this zoning change will adversely affect the welfare of the community.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas

states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for. This land is clearly ill-suited for industrial use and should not be zoned for it.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Lynn Lewis

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

To the members of the council:

I am writing to urge you to please vote no on ordinance #2017-302. I am an Environmental Planner and concerned current resident of Shepherdstown (Kearneysville Pike) and am deeply concerned about the impacts of allowing heavy industry to operate in Ranson.

I was born and raised in the Southern part of West Virginia - also known as the Chemical Valley - and I knew from a very young age that I would never be a long term resident, establish roots, or raise a family in that toxic region of our state. I moved away for college and ended up spending the better part of the last two decades in New York, establishing a professional career that I would have no hope of achieving within the economically deprived borders of West Virginia.

It was always a hope of mine to find a way to return to the state someday, and so two years ago, I did just that. I relocated and began to re-establish my life in the Eastern Panhandle of WV - a beautiful part of our state that allows for peaceful, rural living with convenience and access to business/job opportunities in the DC/VA/MD cities.

Unfortunately and to my surprise, just about the time I arrived here, I learned that our community was in the middle of a development battle with Rockwool - facing immediate and immense threats to the land, air and water in Ranson, surrounding areas, and the entire EP region. I was devastated...

Why do this state and our representatives continuously make decisions that are detrimental to the health, wellbeing and FUTURE of West Virginia? Literally, every other part of this state has prioritized industry and shitty business deals over the interests of the people. Why do you feel

compelled to follow in their footsteps? The one good thing that the state has going for it is the Eastern Panhandle... Please don't turn it into another Chemical Valley!

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan states that the city must ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” The council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Amber G. Myers

Why do this state and our representatives continuously make decisions that are detrimental to the health, wellbeing and FUTURE of West Virginia? Literally, every other part of this state has prioritized industry and shitty business deals over the interests of the people. Why do you feel

compelled to follow in their footsteps? The one good thing that the state has going for it is the Eastern Panhandle... Please don't turn it into another Chemical Valley!

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan states that the city must ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” The council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Ambeer Myers
Shepherdstown, 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Susan Haney

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

1st Rockwool, now this- really!!! Why not just say no equines/equestrian businesses welcome!

Sincerely,
Michelle King

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I'm Paula Jean Swearengin, and I'm running for US Senate. I urge you to vote NO on ordinance #2017-302. This Ordinance runs contrary to comprehensive plan of the City of Ranson, which states (in part):

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

Rockwool clearly risks the health, safety, and welfare of the community. This ordinance is not moral.

We know that "The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community."

This ordinance is also not sensible. Rockwool will harm other industries that are the pillars of the local economy, including agriculture, tourism, and more—and because of the karst geology, it will also threaten the region's water. This land is not suited to the use of this type of heavy industry.

Further, installing this polluting eyesore would damage the property values of the hardworking citizens of Jefferson County in order to enrich lobbyists, shareholders, and executives. This ordinance is unethical.

The city's duty is to ensure the welfare of its citizens, and this ordinance endangers them. It is not moral, sensible, or ethical. I urge the council to choose the side of the citizens of Jefferson County, and vote no on the zoning change proposed in ordinance #2017-302.

Sincerely,

Paula Jean Swearengin

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Joette Borzik

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Tim Stark

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Erica Carbone

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Wil H

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on the wastewater treatment systems, burden the rate payers and risk surface waterways in Charles Town, risking the health, safety and welfare of the community. The comprehensive plan of Ranson states, the City "will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." Therefore, please vote NO on #2017-302.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and

beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant. Furthermore, the corrosive nature of chloride can cause damage to pipes both in the wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system. Through these effects, the industry this zoning will provide for will adversely effect the health, safety, and welfare of the community.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the

proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wild life. Through these effects, the industry this zoning would allow will adversely effect the health, safety, and welfare of our community. This is being done with out representation of those it will affect the most. Please vote No on Ordinance #2017-302.

Sincerely,

Cara LaVigne

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional stress and uncertainty into children's lives. Households living in areas affected by particulate

matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." This zoning change would clearly adversely affect the health, safety, and welfare of the community. Children face increased exposure to air pollution adversely affecting their health, financial instability adversely affecting their welfare, groundwater contamination adversely affecting their safety, and environmental injustice and discrimination if ordinance #2017-302 is passed. Educators will face increased air pollution adversely affecting their health and consequently welfare. These adverse effects are all against Ranson's Comprehensive Plan. Please vote NO on Ordinance #2017-302.

I retired from Loudoun County Schools in 2015 and decided to return to teaching in my home county of Jefferson. Our children deserve the best education and a safe, clean environment. As leaders of this county, let's invest in their future. Having a county where corporate interests are placed before the well-being of its citizens, and more importantly, its children, is not a place one would want to live or work. Jefferson County loses if Rockwool wins.

Sincerely,

Kathryn Emswiler

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

WE DON'T NEED ANY MORE POLLUTANTS IN OUR AIR AND WATER! Please think about the health of people and vote NO.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Barbara Trader

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

Lisa Long
Shepherdstown, 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Barbara Schectman

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I am co-owner of Warm Springs Racing, LLC and am writing on their behalf.

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

richard freer

In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

Josephine freer

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I lived in the Eastern Panhandle of West Virginia for 14 years, between 1998 and 2012. I am intimately familiar with Ranson, Jefferson County, and the site proposed for the contemplated Rockwool industrial development. I am also technically well-versed on the peculiar variabilities of building on karat topography, having initiated litigation in 2004 against the Berkeley County Planning Commission on proposed residential development in the Whiting's Neck section of Berkeley County that would have compromised groundwater in that area. That litigation ("Concerned Citizens of Whiting's Neck vs. Berkeley County Planning Commission") ultimately went to the West Virginia Supreme Court for appellate review.

It is inconceivable to me that Ranson and Jefferson County have allowed the proposed Rockwool development to proceed with this level of accommodation, without sufficient, in-depth analysis of the impacts of a dirty industrial operation on groundwater, land use, and social concerns that a city's comprehensive plan seemingly values. Your decision on this ordinance could either allow a series of tragic mistakes to proceed and be compounded ... or could be the start of a much-needed reanalysis of a project fraught with environmental and social concerns which, heretofore, have been insufficiently considered.

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City.

Sincerely,

David Klinger
Boise, Idaho, 83702

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous estavelles and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersement in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

William Grinnan

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Jennifer Hayes

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Terrina Long

To: spfaltzgraff@ransonwv.us; dpierson@ransonwv.us; gtaylor@ransonwv.us; scoulter@frontiernet.net; tgrant@ransonwv.us; astroud@ransonwv.us; andersonantS@aol.com; donhainessr@gmail.com
Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

WILLIAM C SPARE

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I'm a western Loudoun County farmer who has agritourism events at my farm, and who enjoys visiting the Shepherdstown/Harpers Ferry area for its restaurants, historic areas, and scenic beauty. Construction of the Rockwool Plant will be detrimental both to my farm's profitability and your area's tourism economy.

I have read the Forbes Magazine piece on how this plant was approved, and there is no question that elected officials' reputations have been sullied by how this project was sprung on citizens without their input or approval. But you have a chance to regain the respect of your constituents.

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to

achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Martha Polkey

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Loretta Schoettler

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous estavelles and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Fanny Chang

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Kathleen Hays

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

The concentration of daycare centers and schools within a few miles of the area make the rezoning particularly dangerous. It is outrageous that Ranson would be risking the health and development of its most vulnerable citizens, its children, by allowing the levels of air pollution

emitted by industrial facilities permitted by the rezoning. The pollution levels will be compounded as more heavy manufacturing companies choose to locate in the area.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Lynne Fry

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Patrice Gallagher

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Having read several reasons why this ordinance is not in the best interests of most citizens of West Virginia and Maryland, I respectfully request that you VOTE NO on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in my own state of Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable adverse influence on the quality of life in neighboring states.

Sincerely,

Mark Gregory

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Levi Pellegrin

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Gerard Pugliese

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudoun and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Carolyn Thomas

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Gerard Pugliese

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

George Smith

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Scott Seeberger

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

As a resident of Shepherdstown, I am greatly concerned about the impact of the types of industry allowed in the proposed rezoning. The impact to the residents of this community and county, especially our children and those with compromised breathing of which I am one, would be negative. One of the things that drew me to this area was its rural atmosphere and clean air. This type of industry would not be compatible with what was intended for the property affected by the proposed rezoning. The negatives relating to the health of the environment and the residents far outweigh the few jobs that will be provided.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will

protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term

economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Susan Lewis

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Janice Carduner

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in West Virginia AND neighboring states such as Maryland.

I am appalled that you would even consider this ordinance! The mature karst hydrogeology of this area clearly shows that the groundwater aquifer is highly sensitive to contamination from surface activities. If you propose that heavy industry would NOT create negative surface activities, you are NOT being realistic.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to

be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

The types of industry allowed by the zoning proposed in Ranson Municipal Code § 19-20 and Chapter 19A, Article 1: 'Jefferson Orchards' Reallocating Transect Districts (District 8, Tax Map 12, Parcel 1), especially given the definition of "Special District - Industrial" as used for the purpose of Ordinance #2017-302, do not support the spirit of a mixed-used residential area, nor contribute to the categories of industrial activity compatible with the economy and health of neighboring towns, including Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson

County that are directly supported by tourism. In this way the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Gracie Chaney

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on the wastewater treatment systems, burden the rate payers and risk surface waterways in Charles Town, risking the health, safety and welfare of the community. The comprehensive plan of Ranson states, the City "will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." Therefore, please vote NO on #2017-302.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and

beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant. Furthermore, the corrosive nature of chloride can cause damage to pipes both in the wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system. Through these effects, the industry this zoning will provide for will adversely effect the health, safety, and welfare of the community.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the

proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wild life. Through these effects, the industry this zoning would allow will adversely effect the health, safety, and welfare of our community. This is being done with out representation of those it will affect the most. Please vote No on Ordinance #2017-302.

Sincerely,

David Viteri

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Kim Larson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional stress and uncertainty into children's lives. Households living in areas affected by particulate

matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish. Furthermore, one of my good friends is Principal Nicole Johnson of North Jefferson Elementary. She is a cancer survivor who would be at risk if she has to deal with more pollution on a regular basis. Beyond Principal Johnson, I am a local educator and am friends with many other fine people who work at North. They give their hearts and time to this vulnerable population of students, and the least we can do to reward their efforts is protect their health.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." This zoning change would clearly adversely affect the health, safety, and welfare of the community. Children face increased exposure to air pollution adversely affecting their health, financial instability adversely affecting their welfare, groundwater contamination adversely affecting their safety, and environmental injustice and discrimination if ordinance #2017-302 is passed. Educators will face increased air pollution adversely affecting their health and consequently welfare. These adverse effects are all against Ranson's Comprehensive Plan. Please vote NO on Ordinance #2017-302.

Sincerely,

Priscilla Alden Rodd

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

I live on the east side of the mountain that has Maryland Heights trail & scenic overlook. We use Weverton to access the C & O to bike & walk on to Harpers Ferry 3 times a week. Please do not pollute this beautiful area of our lovely region that offers enjoyment to so many. So many tourists come to this area for the same reason we love it so much. Don't sell this beautiful land to water & air pollution! Safe it for future generations to enjoy! Don't be short sighted please!!!!

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of

wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Debbie Satorius

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

The well being of humans and other animals should always matter more than corporate profits. The horse industry is particularly significant to Jefferson County and its residents. It would be a big mistake to harm the health of either in pursuit of a few jobs added by bringing in a known polluter to operate in the area. Look for clean industries and technologies that complement the existing economy and benefit the citizens without harmful effects.

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models,

these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers,

small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning

change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302

Sincerely,

Rhonda Turman

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I am a resident of Jefferson County and moved here 4 years ago from CA. The drought and wildfires there were getting worse and I thought this area would be free from such environmental disasters. Having grown up in Martinsburg I knew that the Eastern Panhandle was a desirable location and I thought the area given its unique Karst geology would never be considered for industrial growth. Also the historical significance of this area dating back to the origins of our nation. We have thrived here and have no need for industrial jobs. It is a stupid idea. Residential growth, agriculture, tourism and all the uniqueness that makes us a desirable place to live will be destroyed.

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will

protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term

economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Mary Mattlage
Shepherdstown, 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure, with the natural and historic resources tourists flock to see each year, and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychological midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of

Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the *Atmospheric Environment* titled "Impaired Visibility: The Air Pollution People See." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in *Environment and Behavior* found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and die tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River. The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a

critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

I am a resident and property owner in the Shannondale area, which is about 15 miles downwind from the Jefferson Orchards site. According to their WV DEP permit, the proposed Rockwool plant will emit 392 tons of hazardous air pollutants per year -- and that doesn't even account for the heavy truck traffic, which will operate 24 hours per day. I plan to retire here in 10-12 years, but lung cancer and emphysema were not part of my retirement plans. The proposed industrial development of the Jefferson Orchards site will lower our property values, by making Jefferson county an unattractive place to live and work. As is well known, the proposed Rockwool plant will be across the street from an elementary school, and within two miles of four public schools, which together educate 30% of students in Jefferson County. The rezoning of the Jefferson Orchards site for heavy industry in 2017 has got to be the most disastrous and irresponsible public policy decision I have ever witnessed in my lifetime. It is unconscionable to risk the health of thousands of children, and the quality of life of thousands of Jefferson County residents like myself, all in exchange for just 150 jobs. The costs clearly outweigh the benefits!

The dangerous health effects and negative economic consequences from the industrial pollution that this rezoning will allow will be born out over the length of people's lives and that of their decedents. It is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Alex Korovin

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Michael Peterson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudoun and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Thomas Moro

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudoun and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Carol Moro

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on the wastewater treatment systems, burden the rate payers and risk surface waterways in Charles Town, risking the health, safety and welfare of the community. The comprehensive plan of Ranson states, the City "will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." Therefore, please vote NO on #2017-302.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and

beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant. Furthermore, the corrosive nature of chloride can cause damage to pipes both in the wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system. Through these effects, the industry this zoning will provide for will adversely effect the health, safety, and welfare of the community.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the

proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wild life. Through these effects, the industry this zoning would allow will adversely effect the health, safety, and welfare of our community. This is being done with out representation of those it will affect the most. Please vote No on Ordinance #2017-302.

Sincerely,

Bethany Hall

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302.

Harpers Ferry is my home. I've volunteered hundreds of hours planting trees, monitoring and taking care of Elks Run, serving on local boards to include the Eastern West Virginia Community Foundation, and providing free art classes to local youth. Most of these activities happen outside within 10 miles of the proposed industrial zone. I am asking you to do what is best for the health of all community members. I don't understand the rationale that industry will provide much needed jobs when there is no guarantee those jobs won't be made obsolete by technology, and the pre-covid unemployment rate was relatively low in this region. Why would you put so many people's health at risk for a relatively small number of jobs? And once you zone this industrial you can't take it back.

Can you guarantee that there will be no leakage of harmful chemicals into the Elks Run, the headwaters of which is dangerously near if not in the proposed industrial zone? Elks Run provides the drinking water for Harpers Ferry.

If for no one else but the hundreds of children who go to school within five miles of the proposed industrial zone please vote NO. Nothing is worth putting their health at risk, also something you can't take back or fix.

This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits.

Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and die tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River. The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Beth Brent

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Lorraine Blaydes

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Bonnie Good

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Lisa Jarosinski

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland, not to mention your own Ranson & surrounding area residents! Please pay attention to the science - it will be too late to try to undo the damage later.

The Potomac River provides DRINKING WATER and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known KARST TERRAIN. This water will be contaminant from several sources including PARTICULATE MATTER that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to CONTAMINATION by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, SINKHOLES are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. In this way, this zoning change and the industry it will provide for will adversely affect the WELFARE OF THE COMMUNITY. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

AIR POLLUTION poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

THANK YOU VERY MUCH for reading this letter and truly contemplating the potential hazards of this proposed zoning and its likely threats to a clean, safe, & healthy environment for ALL VA & MD residents.

Sincerely,

Lydia LaGue

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The comprehensive plan of Ranson is clear: it states, "the City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." This land is ill-suited for an industrial facility due to its location and hydrogeology. Further, the industry that this zoning change will allow for will adversely affect the health, safety, and welfare of the community through its affect on the agricultural industry.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the

bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer. In this way, this zoning change will adversely affect the welfare of the community.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas

states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for. This land is clearly ill-suited for industrial use and should not be zoned for it.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Janet Bailey

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on the wastewater treatment systems, burden the rate payers and risk surface waterways in Charles Town, risking the health, safety and welfare of the community. The comprehensive plan of Ranson states, the City "will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." Therefore, please vote NO on #2017-302.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and

beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant. Furthermore, the corrosive nature of chloride can cause damage to pipes both in the wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system. Through these effects, the industry this zoning will provide for will adversely effect the health, safety, and welfare of the community.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the

proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wild life. Through these effects, the industry this zoning would allow will adversely effect the health, safety, and welfare of our community. This is being done with out representation of those it will affect the most. Please vote No on Ordinance #2017-302.

Sincerely,

Belinda Moore

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302.

As a hydrogeologist with 45 years of experience, my primary concern is the subsurface impact to the hydrogeology. The area is simple not right for this type of industry. The potential negative impact on groundwater, both quality and quantity is very significant. It simple does not make sense to allow such development in this karst region.

Please vote no on the ordinance #2017-302.

Sincerely,

David Ward

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Debra Chan
Kearneysville , 25430

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Rita Bumgardner

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

Sarah Myers

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Andrew Singletary

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

As a good neighbor, I'm respectfully requesting that you do the right thing on behalf of "We the People" and vote NO on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in your own state much less us in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Sharon Garlena

Sent: 6/17/2020 20:22
To: spfaltzgraff@ransonwv.us; dpierson@ransonwv.us; gtaylor@ransonwv.us; scoulter@frontiernet.net; tgrant@ransonwv.us; astroud@ransonwv.us; andersonantS@aol.com; donhainessr@gmail.com
Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional stress and uncertainty into children's lives. Households living in areas affected by particulate

matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." This zoning change would clearly adversely affect the health, safety, and welfare of the community. Children face increased exposure to air pollution adversely affecting their health, financial instability adversely affecting their welfare, groundwater contamination adversely affecting their safety, and environmental injustice and discrimination if ordinance #2017-302 is passed. Educators will face increased air pollution adversely affecting their health and consequently welfare. These adverse effects are all against Ranson's Comprehensive Plan. Please vote NO on Ordinance #2017-302.

Sincerely,

Bethany Williams

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Charles Witt

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

VOTE NO ON ORDINANCE #2017-302!

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the

health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it.

Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Pia Peltola

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Living in a home on well water, and growing my own food, I have serious concerns about the toxic chemicals that will drift over my home and find their way into our drinking water and food.

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Hello , I am asking you on a personal level to vote no #2017-302 Even though my address says Shenandoah Jct, I live less then a half mile from this site. I can hear all the activity that has been going on for the pass year and half from my front porch. And it is not pleasant . One could say it is just construction - No it is not just construction, when you can hear dump trucks dumping their loads. That is too close to a residential subdivision (Shenandoah farms) in which I live. We can not get city treated water where I live. So can you guarantee me that if you allow this heavy industry site that I will have clean water as I do now and guarantee me the noise from all the trucks and factory operations will not be noise nuisance/pollution at my house and that I will be breathing air that is not bad????? No I don't think you can guarantee this!! Attempting to have heavy industry In this area is a very bad idea. And it doesn't take someone with a degree in science to know that If you live in this area, you would know how the water, noise and air moves about the landscape.

Don't be scared that Rockwool will sue. If you vote no. They were asked to stop early in their start of the build. They knew they were building at their own risk. And they elected to keep building.

Please vote no.

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates

through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be “extremely vulnerable to pollution” due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous estavelles and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP's own karst guidance: "attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination." Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it "inadequate to safeguard the public and the environment." We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that "Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age." Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA's Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory.

Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses' health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Keith Pingley

These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

TJ Roch

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Shanika McCloud
Charles Town, 25414

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

My mother lived in random for many years. I attended shepherd college in the 70s. These beautiful small towns are local gems and the Potomac river way a national treasure. Please don't sacrifice it for industry!

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Sabrina Massett

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Lynn Sevall
Shepherdstown, 25443

To: spfaltzgraff@ransonwv.us; dpierson@ransonwv.us; gtaylor@ransonwv.us; scoulter@frontiernet.net; tgrant@ransonwv.us; astroud@ransonwv.us; andersonantS@aol.com; donhainessr@gmail.com
Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Cherif Oubouzar

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Monica Greene

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

Elke Matthews

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Dirick Cummins

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Suzette Wimer

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

As a citizen of Jefferson county I agree with the above statement. In my view it comes down to a simple analogy. Would you build your house in a swamp or on solid ground? Geologically speaking the karst is like swiss cheese not really suitable for heavy industry. In addition the downside risk of the Rockwool plant is enormous and should a failure in the holding pond occur the entire aquifer would be at risk of contamination. Last figure I heard was that there were over 10,000 private wells in the county. Who will pay for the damage done when Rockwool can simply declare bankruptcy? Just my 2 cents.

Sincerely,

Max A Gold

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

Roland Jacobs

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Greg Smith

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The comprehensive plan of Ranson is clear: it states, "the City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." This land is ill-suited for an industrial facility due to its location and hydrogeology. Further, the industry that this zoning change will allow for will adversely affect the health, safety, and welfare of the community through its affect on the agricultural industry.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the

bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer. In this way, this zoning change will adversely affect the welfare of the community.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas

states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for. This land is clearly ill-suited for industrial use and should not be zoned for it.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Lars Prillaman

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Please vote no and keep us all safe! Thank you for doing the right thing. People come first, not industries.

Sincerely,

Christina StClair

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

When elected officials are sworn to secrecy and hide information from the people that were elected to represent is just wrong. Also a company that will not use its own name (Rockwool) knows that it's factory is harmful to the environment and to the people is around it is not worthy of doing business in our county.

VOTE NO on industries like Rockwool !!!!

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects

are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer

development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Joseph Adams

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Jeff Tunkel

Subject: Written Public Comment for hearing on #2017-302

Dear Ranson Mayor and City Council members,

A personal comment to this letter. I am deeply concerned about all of the issues below but most of all, I am concerned that this state has no interest in deviating from it's historical past of selling out it's people, it's land and resources; leaving a wreckage of pollution and destruction; all for the profits of others, elsewhere. I am angry that the elected officials do not care for the will of the majority of the people, I am angry that they have violated their own comprehensive plan and sold us out, for a mere 150 jobs. I have come to truly hate this state, it's government and I cannot wait for my husband to retire and to leave and take our family with us. This state does not have any sort of future I want for myself or our children. Ranson has left a deeply negative impression upon me and I try to never drive through it, do business in it or otherwise allow a single penny of my hard earned money to land in it's pocket. It's a terrible feeling to truly hate where you live and to distrust the government, from the state level down to the local. Your insistance in building this polluting factory will harm people, will bring down property values and has sown seeds of distrust deep in the entire surrounding region and across state lines into Virginia and Maryland. I await better candidates and future elections and the date of my husband's retirement. I look forward to a state where better choices are made, where citizens are more involved, better educated, more intelligent and where the health and welfare of the land, the people and the economy are truly valued - because that isn't so here.

- Karen Glennon

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Karen Glennon

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Sharon Wilt

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the street from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Thank you,

Lisa Giovarelli

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Please respect the future generations and the Negative impact this will have.

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated

subdivision and an elementary school already exit directly across the street. While these latter community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Kate Gelhard

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudoun and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Dan Jeffers

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

In addition to the above, West Virginia has the highest Death Rate per 100,000 people in America per the World Life Expectancy website. The U.S. average is 731.91 while WV is 957.13 followed by Mississippi. In 2012, according to the Census Bureau, West Virginia was the only state where Death Rates exceeds Birth Rates. During 2010-2013, about 21,000 babies per year were born in West Virginia, but there were 24,000 deaths. In demographics, this is called a "net mortality society."

Not only does West Virginia have the highest Death Rate. It also ranks just above last place Mississippi for Life Expectancy. A Jefferson County man is expected to live almost 2 years longer than a Berkeley County man. Could this be from Jefferson only having 22 pounds on its TRI Report (Toxic Release Inventory) while Berkeley had over 426,000 pounds of toxins released in the air?

Looking at a West Virginia map of Death by Lung Disease (cancer not included) on the World Life Expectancy website shows an almost all red state (above average). There were 43 red counties above average deaths for lung disease, one blue county for below average, and 11 gray for normal. Jefferson County is gray now and Berkeley County is red. Will Jefferson County be red (above the average for death by lung disease)?

Voting No for the ordinance #2017-302 will keep Jefferson County in the normal range for deaths by Lung Diseases and you will be supporting the health, safety, and welfare of the community.

Sincerely,

Mary B. Reed

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Tracy Gravel

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Mrs. April McCoy

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Protect the equine trainers.

Keep the environment clean.

Sincerely,

Jill Rowland

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Kara Durrschmidt

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Kathleen Cline

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

Roman Hornich

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please honor the work and memory of Mayor Hamill and reject this horrific decision to contaminate Jefferson County.

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated

subdivision and an elementary school already exit directly across the street. While these latter community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Bruce Appelgren

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson County will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson County at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I've been shopping for a home. I will spend property taxes in Maryland if Rockwool and the industrial zone is not stopped.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Maria Parisi

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Andy Billotti
Middletown, 21769

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

Sandra Green

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Suzanne Kemp

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Sue Kemp

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Andrea Mitchell

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As local residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their

improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing, listen to your constituents, and vote no on ordinance #2017-302.

Sincerely,

Zach Morse

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Charles Miller

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Meryana Vincent

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. In this way, this zoning change and the industry it will provide for will adversely affect the welfare

of the community. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

My family spends a lot of time enjoying fresh air and nature in this area - we would be devastated to lose the natural beauty and resources it offers to residents and visitors. It is something that makes Maryland unique and valuable and we have been proud to call this special place our home for the past almost thirty years.

I also serve as Secretary of the Board for the Heart of The Civil War Heritage Area, an area rich in history, covering portions of Carroll, Frederick, and Washington Counties. The mission of the Heart of the Civil War Heritage Area is to promote the stewardship of our historic, cultural, and natural Civil War resources; encourage superior visitor experiences; and stimulate tourism, economic prosperity, and educational development, thereby improving the quality of life in our community for the benefit of both residents and visitors. It is an independent nonprofit organization guided by a Board of Directors and an Advisory Council comprised of representatives of local government units, state and national parks, private organizations and businesses, and individuals from all three counties in the Heritage Area.

On behalf of the residents and visitors who benefit from our work, I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Alyssa Poulin

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Erica Hottel

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The comprehensive plan of Ranson is clear: it states, "the City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." This land is ill-suited for an industrial facility due to its location and hydrogeology. Further, the industry that this zoning change will allow for will adversely affect the health, safety, and welfare of the community through its affect on the agricultural industry.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the

bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer. In this way, this zoning change will adversely affect the welfare of the community.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas

states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for. This land is clearly ill-suited for industrial use and should not be zoned for it.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Pat Grinnan

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous estavelles and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersement in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Joseph Hill

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Cassidy Stoner

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. In this way, this zoning change and the industry it will provide for will adversely affect the welfare

of the community. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Ricky Pereira

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

As someone who has personally worked in the Cultural Resource Management field, I can attest that the precautions put in place to reduce pollution in air and downstream water are NOT ENOUGH. We need to protect this area now before it is too late. Please vote with what you know is RIGHT and not with the biggest money grab. These industries have bought us and given us nothing in return. I urge you to vote no.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in

waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Meredith Elam

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

On a personal note, as someone who already experiences respiratory difficulties with seasonal allergies and asthma, I urge you to vote no on this ordinance. I would probably have to relocate if Rockwool were to successfully come to this area and I know a lot of others would as well. I'm not sure what good Rockwool does if everyone leaves the area and the only ones left are stuck and unable to relocate and suffer the health consequences.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County

Sincerely,

Sam Yates

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

The potential economic benefit from the proposed re zoning will be undone by damaging the health of residents and the ecosystem of the Potomac. Do not let short sighted greed cause devastation. I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Mary Fortuna

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County. I am strongly opposed to having any heavy industry being brought to our area especially to the Ranson site. Not only is the proposed site incredibly too close to the low income public school of North Jefferson, it would also impact the lives of children throughout the area. Research has shown that air pollution accumulation results in impediment to cognitive development and performance (National Academy of Sciences Journal. "Air pollution can cause everyone to reduce their level of education by one year, which is huge." Professor Xi Chen from Yale School of Public Health. How can we allow the economic development from this unwanted form of industry to impact the lives, livelihood and intelligence of our community. Please vote no on this ordinance and help create a better and brighter future for our children and families.

I have been a teacher in the area for almost 2 decades. I also own a small preschool within a couple miles of the proposed heavy industrial zone. I

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater

contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional stress and uncertainty into children's lives. Households living in areas affected by particulate matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." This zoning change would clearly adversely affect the health, safety, and welfare of the community. Children face increased exposure to air pollution adversely affecting their health, financial instability adversely affecting their welfare, groundwater contamination adversely affecting their safety, and environmental injustice and discrimination if ordinance #2017-302 is passed. Educators will face increased air pollution adversely affecting their health and consequently welfare. These adverse effects are all against Ranson's Comprehensive Plan. Please vote NO on Ordinance #2017-302.

Sincerely,

Anne Young

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Sydney Yates
Shepherdstown, 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Kathleen Shively

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional stress and uncertainty into children's lives. Households living in areas affected by particulate

matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." This zoning change would clearly adversely affect the health, safety, and welfare of the community. Children face increased exposure to air pollution adversely affecting their health, financial instability adversely affecting their welfare, groundwater contamination adversely affecting their safety, and environmental injustice and discrimination if ordinance #2017-302 is passed. Educators will face increased air pollution adversely affecting their health and consequently welfare. These adverse effects are all against Ranson's Comprehensive Plan. Please vote NO on Ordinance #2017-302.

Sincerely,

Abigail Beavin

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Jacqueline Fischer

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson County will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson County at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Christine Spilker

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Laura Graeber

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional stress and uncertainty into children's lives. Households living in areas affected by particulate

matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." This zoning change would clearly adversely affect the health, safety, and welfare of the community. Children face increased exposure to air pollution adversely affecting their health, financial instability adversely affecting their welfare, groundwater contamination adversely affecting their safety, and environmental injustice and discrimination if ordinance #2017-302 is passed. Educators will face increased air pollution adversely affecting their health and consequently welfare. These adverse effects are all against Ranson's Comprehensive Plan. Please vote NO on Ordinance #2017-302.

Sincerely,

Christine Spilker

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Chuck Romano

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous estevelles and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersement in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Donna Stoner

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Russell Meadows

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Elizabeth Reinhart

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

May 7, 2020

Dear Mayor Pierson,

This letter is calling for your immediate resignation as Mayor of the City of Ranson and for you to make a formal apology to the people of Jefferson County for attempting to destroy their environment, and most importantly, the health of their children.

The City of Ranson's misdeeds in respect to Rockwool and "Project Shuttle" are many, and I don't have the time or the patience to reiterate them all in this letter. This letter will highlight some of the most glaring reasons for you to resign.

1. It is clear from yesterday's court ruling that the City of Ranson misused "sustainable community" smart zoning to allow heavy industry when they rezoned for Rockwool, and they did it without proper public notice. Like much of "Project Shuttle", the City of Ranson sought to deceive the public and its neighboring cities.
2. As Mayor of Charles Town, I sought to be a good partner and friend of Ranson. Our comprehensive plan, which our citizens worked on for over a year, sought to align many of our goals with that of Ranson's and its comprehensive plan. However, by the entity of Ranson's deceitful tactics, you destroyed that trust, and the trust of the people. You negated years of hard work by citizens of Charles Town.
3. I was personally lied to regarding "Project Shuttle" and the framework for Rockwool's operations. As a former Climate Mayor, a Mayor for Solar, and a supporter of the Beyond Coal movement, I never would have publicly supported Rockwool if I had known they would be burning 93 tons of coal per day across the street from an elementary school. To make this clear

for you, I was told Rockwool would not be burning coal. In fact, I was told that another process, a more environmentally sustainable process would be used. This of course was a lie. Was it the same thing they told Commissioner Osnoko when he publicly stated that the air coming out of Rockwool's stacks would be cleaner than the ambient air? Was this the process they explained to the Jefferson County School Board? Was this the process they explained to the Jefferson County Commission.

4. Further, the City of Ranson sought to intimidate me directly or through intermediaries on more than one occasion. For example, your city attorney said you would have me removed from office for criticizing you and your former City Manager, Andy Blake's leadership. Admittedly, I laughed at this, and to be quite frank with you, I told our city lawyer to tell you and your lawyer something I won't repeat. However, I was contacted by a Charles Town City Council member who was concerned that you would pull out of police and other cooperative programs with Charles Town, so I backed off. I regret backing off, I should have continued to press for your removal and for full investigation into the City of Ranson, Rockwool and other entities.

5. I received a phone call from a consultant of the City of Ranson noting that if I did not stop criticizing the City of Ranson, Project Shuttle, and Rockwool, that Ranson would cancel the Christmas Parade, and pull out of police and other cooperation with the City of Charles Town. We know how you played this out in the press. Further, I was told that I had made powerful enemies within the State of West Virginia and I should keep my mouth quiet on this topic for my own good.

6. Following the secret meeting at the Bavarian Inn, which included West Virginia state officials, Ranson officials, Rockwool, and other pro-Rockwool stakeholders my life would forever change. Following that meeting there was a concerted effort by pro-Rockwool supporters, which I believe in some cases rose to the level of a criminal conspiracy to drive me from office and my family from West Virginia.

7. Additionally, because of my opposition to Rockwool, I was threatened with more lawsuits than I can remember. I was threatened with being doxed, and in fact, I was doxed, with the release of my personal home number, people threatened to come to my home, and my computer was broken into. This has been reported.

8. More recently, a pro-Rockwool group, that has received the praise of Bjørn Rici Andersen, Senior Vice President, Group Operations & Technology for Rockwool, contacted my place of employment, libeled me, threatened to sue me, all because I spoke out against their supported pro-Rockwool candidates. You may know these folks, Duke.

So, Duke, this is just a snapshot of how my life has gone since Rockwool, and the reality is, I am tired of being threatened.

If you have any shred of honor or human decency left, you will resign and apologize to the people of Jefferson County for the evil you have unleashed. Please apologize to the crying mothers who asked me to stop Rockwool from building their coal-fired, heavy industrial factory that will poison their children's air.

Duke, do the right thing, apologise and resign.

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

“10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community.”

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and trainers. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Shannon Richards

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Jessica Nichols

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area. Purcellville and surrounding areas will suffer from the toxic emissions coming downwind and straight our way.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standers (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated

that the ground water adjacent to the site to be rezoned communicates readily with surface water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

I am a Jefferson County resident living in the Bardane/Kearneysville area near the Rockwool site. I use the Route 9 bike path for recreation - running, biking, and walking - and, more importantly, I breathe the air every day at my home nearby. I am strongly opposed to the negative effects on the environment surrounding me that will result from the Rockwool plant, as well as the negative impact of increased truck traffic on Rt. 115, a road that clearly was not designed to handle large volumes of industrial vehicles.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous estavelles and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While

this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but

is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and

would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses' health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Thom Potts

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Lisa Gregory

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Jessica Silva

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson County will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson County at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Katelyn Walters

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

My husband, two young daughters, and I live in Kearneysville. We are concerned about the health and economic impacts of allowing heavy industry near our home.

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous estavelles and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is

supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst

hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided

for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Megan Stickel

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Susan Biggs

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Once we open the door to heavy industry, there is no closing it. We'll be saying goodbye to our ecotourism and agriculture industries in favor of polluting industry. Please do what's right for the people who live here and protect our health, our children, and our livelihood. Your vote can stop this before it starts. Please say no to industries that take away from our community, not add to it.

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The

ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson

Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River. The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Katie Kopsick

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous estevelles and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersement in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Gabriel Collins

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

David Hines

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

As a very concerned citizen and father of a young child I'm strongly opposed to such a reckless use of our land. Stop polluting our air with toxins and utilize that area for the good of the community. Options could include a solar array or wildlife refuge just to name two. We the people do not want more destruction of this planet at the hands of the greedy.

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

As a parent, citizen, husband, and university professor living just outside of Harpers Ferry in the Gap View neighborhood, I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional

stress and uncertainty into children's lives. Households living in areas affected by particulate matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." This zoning change would clearly adversely affect the health, safety, and welfare of the community. Children face increased exposure to air pollution adversely affecting their health, financial instability adversely affecting their welfare, groundwater contamination adversely affecting their safety, and environmental injustice and discrimination if ordinance #2017-302 is passed. Educators will face increased air pollution adversely affecting their health and consequently welfare. These adverse effects are all against Ranson's Comprehensive Plan. Please vote NO on Ordinance #2017-302.

Sincerely,

Matt Kushin

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The comprehensive plan of Ranson is clear: it states, "the City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." This land is ill-suited for an industrial facility due to its location and hydrogeology. Further, the industry that this zoning change will allow for will adversely affect the health, safety, and welfare of the community through its affect on the agricultural industry.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the

bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer. In this way, this zoning change will adversely affect the welfare of the community.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas

states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for. This land is clearly ill-suited for industrial use and should not be zoned for it.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Devon Porter

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Furthermore, the city failed to provide adequate notice to immediately affected adjacent property owners concerning the original annexation and subsequent re-zoning. These property owners should have been contacted directly by certified mail as is the practice in most jurisdictions.

Sincerely,

Henry Willard

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Gabriele DeVries

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The comprehensive plan of Ranson is clear: it states, "the City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." This land is ill-suited for an industrial facility due to its location and hydrogeology. Further, the industry that this zoning change will allow for will adversely affect the health, safety, and welfare of the community through its affect on the agricultural industry.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the

bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer. In this way, this zoning change will adversely affect the welfare of the community.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas

states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for. This land is clearly ill-suited for industrial use and should not be zoned for it.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Curt Shade

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Heidi Zimmerman

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Elizabeth Goins

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Kay Floyd

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Being in the Public Health Service for the last 24 years these items mentioned above will make this city, town, County very ill. The emission and pollutants although everyone says they are safe are incorrect, we know this, through many of the prior industries and catastrophe's that have and will happen if you proceed with this. Unfortunately you may not realize the impact of

a bad decision until it affects your family, premature death, illnesses exacerbated, birth of new and advanced lung diseases etc. Perhaps you should visit a hospital and see the condition of those who have smoked cigarettes for many years... now these industrial emissions will closely resemble that disease process, it is tough to watch a person gasp for air. You know this will affect those with existing conditions also forcing many to leave their homestead that they grew up in..

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, "the City will designate ample land that is well-suited for industrial facilities." Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more

appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Rob Edwards

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Lauren O'Laughlin

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Matt Printz

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional stress and uncertainty into children's lives. Households living in areas affected by particulate

matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." This zoning change would clearly adversely affect the health, safety, and welfare of the community. Children face increased exposure to air pollution adversely affecting their health, financial instability adversely affecting their welfare, groundwater contamination adversely affecting their safety, and environmental injustice and discrimination if ordinance #2017-302 is passed. Educators will face increased air pollution adversely affecting their health and consequently welfare. These adverse effects are all against Ranson's Comprehensive Plan. Please vote NO on Ordinance #2017-302.

Sincerely,

Ali Printz

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I live in Frederick, Maryland, not too far from Ranson, and I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in my community specifically (because we are downwind from Ranson) and on neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would use large water impoundments in an area of known karst terrain. This water will be contaminated from several sources including particulate matter that has fallen out from the air emissions and processed water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents of Maryland. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Elizabeth Koozmin

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. In this way, this zoning change and the industry it will provide for will adversely affect the welfare

of the community. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

William Keim

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

THE SAGA OF ROCKWOOL FITS SQUARELY INTO THE TROUBLED HISTORY OF WEST VIRGINIA. COMPANIES OWNED BY NON-LOCAL RESIDENTS PREY ON UNDER-FUNDED STATES LIKE OURS. THEY TAKE ADVANTAGE OF LAX ENVIRONMENTAL PROTECTIONS, OFFERING "JOBS" THAT DRY UP BEFORE THE END OF THE DECADE UNLIKE THE EFFECTS OF POLLUTION THAT WILL OUTLIVE US ALL. CITIZENS ARE LEFT TO WONDER WHAT SORTS OF SHADY BACK ROOM DEALS OUR OFFICIALS MADE IN EXCHANGE FOR SELLING US DOWN THE RIVER. THE COUNTY'S EYES ARE ON YOU.

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will

protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term

economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County/

Sincerely,

Eric Smith
Shepherdstown, 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on the wastewater treatment systems, burden the rate payers and risk surface waterways in Charles Town, risking the health, safety and welfare of the community. The comprehensive plan of Ranson states, the City "will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." Therefore, please vote NO on #2017-302.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and

beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant. Furthermore, the corrosive nature of chloride can cause damage to pipes both in the wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system. Through these effects, the industry this zoning will provide for will adversely effect the health, safety, and welfare of the community.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the

proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wild life. Through these effects, the industry this zoning would allow will adversely effect the health, safety, and welfare of our community. This is being done with out representation of those it will affect the most. Please vote No on Ordinance #2017-302.

I DO NOT want heavy industry in our beautiful, historical Jefferson County, WV! Thank you.

Sincerely,
Lisa Linn Arroniz

Concerned Jefferson County Resident

P.S. I apologize if this went through twice, but it didn't show as gone through the first time.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Daniel Shepherd

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Ashley White

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The comprehensive plan of Ranson is clear: it states, "the City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." This land is ill-suited for an industrial facility due to its location and hydrogeology. Further, the industry that this zoning change will allow for will adversely affect the health, safety, and welfare of the community through its affect on the agricultural industry.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the

bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer. In this way, this zoning change will adversely affect the welfare of the community.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas

states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for. This land is clearly ill-suited for industrial use and should not be zoned for it.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Madison Dan

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Lilija Lakickaite

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Linda Miller

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Alexandria Garland
Frederick, 21703

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Clarissa Pintado
Alexandria, 22307

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Veronica Maddox

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I am both confused and unhappy to imagine that this part of West Virginia might go in the direction of heavy industry rather than "stay on the course" to both bring visitors to the area to enjoy the natural beauty and "country environment so close to D.C. and Baltimore and keep the area's air and water safe for the people who live here permanently. Keeping parallel with neighboring Loudoun County and Frederick County is important to me. Those counties value tourism and are already experiencing the increased money and area job expansion from that industry. Heavy industry does not mean real job growth and expansion of the tourism wealth that will come to this area; in fact, heavy industry insures that what tourism is currently here will be at risk as other nearby areas will offer more (recreation, shops, restaurants) than smoke stacks and trucks. As a resident of this area for almost 30 years (we came to live here specifically for direction this part of the state was going), I am very concerned that our water supply and the air that we breathe are in serious jeopardy if any heavy industrial plant becomes operational. The geology of the area does not support safety – there are other areas of the state or country where a factory could be built that does not present the land risk that we have here. If the waters get polluted because that land cannot endure (sinkholes, etc.) and the quality of the air lessens, then the residents of the county will face serious health risks. I vote for clean air and clean water to keep the residents here safe and secure. Then, in that safe and secure environment, I vote to expand and grow the amenities of the area to bring in more visitors who will spend their dollars here rather than somewhere else! I envision so many more jobs going in this direction. I'm thinking there will be enough (clean water, clean air, tourism dollars) for everyone whether you "live in" or "travel to" Loudoun, Frederick or Jefferson County. But I cringe to think that we could lose our part of the goodies if we go down the "heavy industry" road.

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

“10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community.”

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This

is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Richard Polonchak

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Theodore Settanny III

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Elizabeth Lloyd-Russek

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Protect the Environment-you know it is the right thing to do!

Sincerely,

Dawn Bowman

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Brice Barker

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Dave Pugh

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

James Gregory

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

John Puckett C.M.L.

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. I am a registered Republican and work in the northern Virginia area. I would like to offer a different perspective outside of the original environmental concerns you should also be considering. 2 years ago, I was looking for a place to live after taking a new job in the NoVA area. Jefferson County has a unique advantage for those that do not find a longer commute a problem. Moving to Jefferson County gives you access to the NoVA, Washington DC and Maryland metro markets for jobs and work, especially in IT fields. While you may be farther from everything you are still in the middle of everything. Neighboring counties in NoVA are becoming increasingly crowded and are overpriced for anyone trying to raise a family in a decent sized home. Jefferson County schools also do comparatively well in ratings for schools according to greatschool.org and niche.com to its MD and Virginia counterparts. It boasts great religious communities, scenery, and a human culture and hospitality I do not see in the areas I work. Choosing to move to Jefferson County was an easy decision when those options were weighed for me and my wife relocated for work in Virginia. We now call Shepherdstown, WV our home and have been in love still. However, I cannot say with confidence that if I knew about the coming changes to industry moving in our area, and the introduction to Rockwool that we would have made that decision... and I fear that any future families choosing to move here will take that in consideration also. This would be a loss of tax dollars and increased growth into the community, to jeopardize that into technologies that utilize outdated environmental practices that are obviously fading seems foley. I hope everyone would reconsider this choice. When I told my job at the time before I moved that I chose West Virginia as my home, I was routinely laughed at... heckled... and every falsehood imaginable was brought up about the area... please do not prove them right and make those lies into truths.

Most respectfully,

Daniel Scruggs

Shepherdstown, 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Anything industry that could potentially provide toxic air, water and deplete our resources is a danger to humanity. Please vote no, educated reasons are listed below.

If Rockwall persist please insist they use Solar energy and not Coal energy!!!!

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson and Jefferson County that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would

clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, "the City will designate ample land that is well-suited for industrial facilities." This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Debbie Royalty

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Megan Hovey

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

bryan harris

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Judith Layman

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on the wastewater treatment systems, burden the rate payers and risk surface waterways in Charles Town, risking the health, safety and welfare of the community. The comprehensive plan of Ranson states, the City "will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." Therefore, please vote NO on #2017-302.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and

beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant. Furthermore, the corrosive nature of chloride can cause damage to pipes both in the wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system. Through these effects, the industry this zoning will provide for will adversely effect the health, safety, and welfare of the community.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the

proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wild life. Through these effects, the industry this zoning would allow will adversely effect the health, safety, and welfare of our community. This is being done with out representation of those it will affect the most. Please vote No on Ordinance #2017-302.

Sincerely,

Charity Long

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Alan Dattelbaum

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional stress and uncertainty into children's lives. Households living in areas affected by particulate

matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." This zoning change would clearly adversely affect the health, safety, and welfare of the community. Children face increased exposure to air pollution adversely affecting their health, financial instability adversely affecting their welfare, groundwater contamination adversely affecting their safety, and environmental injustice and discrimination if ordinance #2017-302 is passed. Educators will face increased air pollution adversely affecting their health and consequently welfare. These adverse effects are all against Ranson's Comprehensive Plan. Please vote NO on Ordinance #2017-302.

Sincerely,

chelle ferguson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

saundra holloway

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Joanne Herrington

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The comprehensive plan of Ranson is clear: it states, "the City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." This land is ill-suited for an industrial facility due to its location and hydrogeology. Further, the industry that this zoning change will allow for will adversely affect the health, safety, and welfare of the community through its affect on the agricultural industry.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the

bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer. In this way, this zoning change will adversely affect the welfare of the community.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas

states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for. This land is clearly ill-suited for industrial use and should not be zoned for it.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Evanne Cocker

Subject: Written Public Comment for hearing on #2017-302

To City of Ranson,

There is no reason to grant special favors to any out of the USA corporations that want to exploit our neighborhood. The additional burdens this decision will cause for the tax payers of Ranson and Jefferson county will go on for decades. Consider the future not just the present when making this change. Thanks!

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would

clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, "the City will designate ample land that is well-suited for industrial facilities." This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

James McGowen

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Joanne Herrington

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Jon Brundage

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

William Hibbett

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Meredith Donlon

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Kim Henry

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

As a public health nurse, grandmother and alarmed citizen I am voicing my strong opposition to the site chosen for this devastating industrial invasion of our rural, historic tourism community. The impact to our children, our roads, our water infrastructure and our livelihoods is catastrophic, and is not offset by the small number of low end jobs it would create. The decisions made behind closed doors, without input from the community was underhanded. Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Liliana Nuss

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

To whom it may concern,

I live on an organic vegetable farm in Loudon county, and I am writing to respectfully request that you vote NO on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area. This is an area I call home, after having moved here to avoid the pollution of where I lived previously.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Allison Basile

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

As a public health nurse, grandmother and concerned citizen i am deeply troubled by the site and industrial nature of this proposed process. Decisions were made behind closed doors, without input from the affected communities. The effects on our children's health and well-being, our roads and water infrastructure, as well as our rural & uniquely historic nature are devastating.

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson County will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson County at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Ardyth Gilbertson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

I have been following the Rockwool situation over the past couple of years. Even though I lived in Virginia. I was concerned about this issue. I understand that Ranson does not legally need to consider input from out of state, but it is very inconsiderate to not notify neighbors that would be impacted. Your decision affects people out side of West Virginia, that are actually closer to the site than others in Jefferson County. Virginia is only 6 miles from Ranson as the crow flies. Those people will be affected more (environmentally) than some residents of Jefferson County. I used to live in Lovettsville, VA and I moved recently; partially due to the impact and projected pollution plume from the factory. I frequently shopped in Ranson and Charles Town as it was a better experience and closer to me. I would also frequently visit the casino. With the decision of Rockwool I've moved and will no longer shop there nor frequent that casino even though it is closer than the other casinos. I believe this is going to hurt the area economically especially with the incentives Rockwool is receiving.

Even though it would have impacted me, I am more concerned about the impact to the residents of Ranson and the children of the school by the factory. As a former council member, I can say with certainty that this is very poor planning and atypical. There is usually a graded/tiered zoning plan that blends the community. When looking at Ranson's zoning map, I can see where proper graded/tiered zoning was implemented as expected, but the proposed zoning does not match the rest. Perhaps I missed it, but I also didn't see anything about the impact to the viewshed and how that impacts the area.

Finally, as a former council member from my town, I'm surprised and disappointed how this situation was handled. I have also read the interactions of some council members and I'm quite frankly appalled by some of their comments and actions. I can understand trying to defend your point of view and having to battle misinformation as I have been on the other side. However, the interactions and lack of transparency I've witness have been inappropriate and makes me question this whole process even more.

Please vote NO on the rezoning.

Respectfully,

Shaun Staley

To whom it may concern:

I am raising my family in Loudoun County, just a few miles from the West Virginia border and we CANNOT risk the pollution and water contamination that we may experience should this rezoning occur. We are on well water and depend on a clean supply and need fresh air to breath to survive. PLEASE VOTE NO! If not for my sake, then for the sake of my three year old daughter! Thank you.

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from

this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Esther Hafnet

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Lana Bartlett

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional stress and uncertainty into children's lives. Households living in areas affected by particulate

matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." This zoning change would clearly adversely affect the health, safety, and welfare of the community. Children face increased exposure to air pollution adversely affecting their health, financial instability adversely affecting their welfare, groundwater contamination adversely affecting their safety, and environmental injustice and discrimination if ordinance #2017-302 is passed. Educators will face increased air pollution adversely affecting their health and consequently welfare. These adverse effects are all against Ranson's Comprehensive Plan. Please vote NO on Ordinance #2017-302.

Sincerely,

Judy Ott

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Sherie Koob

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Stirling West

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Jessica Ickes
