Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I hope that you vote "no" on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County

Sincerely,

Brian Schatz
Shepherdstown , 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated and average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way it is like an export. Not simply recycling money but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and Hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the view shed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements that usually

have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see, the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the *Atmospheric Environment* titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows: "Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy." People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in *Environment and Behavior* found Perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze. The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the ground water aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the ground water at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that ground water from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles south east of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River. The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water

of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of peoples lives and that of their decedents for at least 3 generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county but the effects will be felt in every part of Ranson and the county.

The Comprehensive plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Lisa Campbell
Harpers Ferry, 25425

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Margarita Carey

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document *Stormwater Management Design in Karst Areas* states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed*, which the WVDEP cites in its own guiding document *Stormwater Management Design in Karst Areas*, clearly agrees stating

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.”

“The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.”

“...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed* states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst

hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM10, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM10!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided

for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

richard freer

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote "NO" on Ordinance #2017-302. The health, well-being and livelihood of your neighbors are at stake!

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is

supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst

hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided

for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Josephine freer

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Barbara June Appelgren

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Please keep our agriculture and equine industry safe! Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly

earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income

living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. Please vote NO on Ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would generate large quantities of wastewater, stored on-site, in an area of known karst terrain. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in Ranson. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-30 will

preserve downstream water quality and ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Carol Ahlum

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Rockwool will send toxic air and water into Jefferson County. Students and teachers in the immediate vicinity will suffer the effects of air pollution and the poisoned water will feed into the ground water, the Potomac River and the Chesapeake Bay.

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Jo McGinnis

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote "NO" on Ordinance #2017-302. The health, well-being and livelihood of your neighbors are at stake!

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of

horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. Please vote NO on Ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote "NO" on Ordinance #2017-302. The health, well-being and livelihood of your neighbors are at stake!

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of

horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. Please vote NO on Ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Rebecca White-Ayraud
Shepherdstown, 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous estevelles and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersement in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document *Stormwater Management Design in Karst Areas* states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed*, which the WVDEP cites in its own guiding document *Stormwater Management Design in Karst Areas*, clearly agrees stating

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.”

“The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.”

“...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed* states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst

hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM10, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM10!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided

for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Matthew Prince

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

matthew stemen

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Steven Lee Crawford

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Jim Watts

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Diana Mullis

Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

The fact that City of Ranson has allowed this toxic plant to be located right in the middle of 4 public schools is unacceptable! Not to mention the irreversible damage it will have on our health and surrounding areas shows the City of Ranson cares more about money than it does about its own citizens and neighboring communities. The people of Jefferson County will never want heavy industry in our area.

Sincerely,

John Shannon

Please vote no on ordinance #2017-302. Jefferson County is known for its natural beauty which attract tourists, adventurers, and outdoor enthusiasts, all of which generate revenue for many businesses and residents. Placing industrial complexes such as Rockwool is detrimental to the unique structure of this area, and will cause harm to our current economic environment, as well as negatively impact the health of our residents. Please help preserve the beauty of Jefferson County and the healthy environment of this region for the citizens who choose to live here specifically for these reasons by voting no on ordinance #2017-302. Please don't set a course that would turn this region into just another industrialized area everyone wants to avoid.

Sincerely,

Eric Hyman

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Meagan Hubbard
Martinsburg, 25403

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Anne Brown

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would generate large quantities of wastewater, stored on-site, in an area of known karst terrain. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in Ranson. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-30 will

preserve downstream water quality and ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Leland Robinson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states. Downstream and downwind pollution effects must always be a part of zoning decisions and I thank you for considering the environmental and physical health of those of us not actually living in West Virginia.

Sincerely,

Charles Huber

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

We are new to this area and have young children. Please consider this.

Sincerely,

Olivia Williams
Shepherdstown, 25443

Subject: Written Public Comment for hearing on #2017-302

Dear City of Ranson,

Jefferson County does not need heavy industry; Jefferson County has everything it needs to attract many visitors, who have been flocking to this county in droves for many years and who will continue to do so, unless Rockwool is allowed to destroy everything that means anything to the citizens here. We have history from the Washington family homes in Charles Town, Storer College, John Brown and the Civil War in Harpers Ferry. We have two famous rivers, The Shenandoah and The Potomac and a healthy river rafting industry; we have mountains, part of the Appalachian Trail and the C&O Canal walking, cycling towpath. There's Shepherd University's annual contemporary theatre festival, the Appalachian Trail Headquarters in Harper's Ferry, the Charles Town Race Track and Casino, the National Conservation Training Center near Shepherdstown, all of which bring people to our county. Heavy industry (like Rockwool) when operational will put a stop to all the above-mentioned activities because the air quality will be so compromised, people will no longer come here to walk, cycle and raft; the horses at the race track will be severely compromised as their lungs draw in the polluted air. Our water will be polluted and our economy will fall to pieces all for some paltry jobs in a factory. Special District - Industrial Zoning is a crime against our unique, beautiful, historic county. You must vote against this. It is a plan designed to make a few people rich and to destroy the rest of us. Thank you.

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Terry Tucker
Shepherdstown, 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly

earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income

living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. Please vote NO on Ordinance #2017-302.

Sincerely,

Karen Freer

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized through out life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and over all earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and over all earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Nancy Rigot

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Peter Chadwick

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I have lived in Jefferson County-Charles Town/Ranson for over 42 years and have see a lot of changes.

The the re-zoning for industrial is not what I want to live near.

The current conflict of interest that got us here should not be repeated or rewarded by allowing this to proceed as if all is well and procedures are followed.

The overwhelming opposition is clear and the dangers to our environment are real!

Let's not make the same mistake twice!

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects

have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Jerry Craft

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including the greater Northern Virginia area.

The viability of the Potomac River is a high priority for Virginia residents.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Kerie Hitt

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated and average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way it is like an export. Not simply recycling money but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and Hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the view shed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements that usually

have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see, the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the *Atmospheric Environment* titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows: "Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy." People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in *Environment and Behavior* found Perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze. The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the ground water aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the ground water at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that ground water from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles south east of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River. The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water

of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of peoples lives and that of their decedents for at least 3 generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county but the effects will be felt in every part of Ranson and the county.

The Comprehensive plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Michael Lacombe

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Cari Sumon

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would generate large quantities of wastewater, stored on-site, in an area of known karst terrain. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in Ranson. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-30 will

preserve downstream water quality and ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Charmaine Campbell

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional

stress and uncertainty into children's lives. Households living in areas affected by particulate matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

Children face increased exposure to air pollution, groundwater contamination, financial instability, and environmental discrimination if ordinance #2017-302 is passed. Please vote no on ordinance #2017-302.

Sincerely,

Dpris McGillick

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Catherine Miller

These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Dan van Buskirk

Subject: Written Public Comment for hearing on #2017-302

To The City of Ranson: Re: #2017-302:

I would urge you to vote no on the above referenced ordinance. Eighteen months ago I retired and moved to my current residence in Harpers Ferry. One of the features about Jefferson Co that so attracted me to retire here was the beauty of the landscape, rivers, and the quality of life enjoyable here.

I strongly believe that by granting the requested rezoning of the property in question will devalue the integrity, quality, and safety of both the air, water, and land of Ranson and adversely affect surrounding municipalities and the welfare of residents like me.

I am strongly opposed to an industry where both air and water pollution either will occur. Both will result in diseases and the quality and integrity of underground water adversely harmed. I have read from many sources that the air quality will indeed be adversely impacted if this zoning request is granted.

The Comprehensive Plan's language is clear and unequivocal. Therefore, I strongly urge you to vote "no" on Ordinance 2017-302. With best regards I remain,

Very truly yours,

William Salmond

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would generate large quantities of wastewater, stored on-site, in an area of known karst terrain. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in Ranson. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-30 will

preserve downstream water quality and ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Robert Ladner

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Amit Patel

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the City only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, *Stormwater Management Design in Karst Areas* states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Jennifer Allmond

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Please please vote no. It scares me to death what leakage will do to my well water. Plus the damage done to our lungs from the pollution. It would be a shame to survive COVID only to die from Rockwools air pollution. Please, please don't be greedy at the expense of Jefferson County citizens.

Respectfully,
Julie West

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,
Ruth Burns

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would generate large quantities of wastewater, stored on-site, in an area of known karst terrain. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in Ranson. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-30 will

preserve downstream water quality and ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Clifford Barr

To: spfaltzgraff@ransonwv.us; dpierson@ransonwv.us; gtaylor@ransonwv.us; scoulter@frontiernet.net; tgrant@ransonwv.us; astroud@ransonwv.us; andersonantS@aol.com; donhainessr@gmail.com
Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Jennifer Wood

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

PLEASE PROTECT OUR WATER AND AIR SUPPLY! I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Amy Peters
Monrovia, 21770

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly

earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income

living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. Please vote NO on Ordinance #2017-302.

Sincerely,

Kathy Blank

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

David Startzell

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document *Stormwater Management Design in Karst Areas* states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed*, which the WVDEP cites in its own guiding document *Stormwater Management Design in Karst Areas*, clearly agrees stating

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.”

“The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.”

“...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed* states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst

hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM10, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM10!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided

for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Craig Terry

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the City only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, *Stormwater Management Design in Karst Areas* states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

MELISSA HOWELL

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Matthew Hoffman

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

In the hopes that you are actually taking the time to read anything personalized, please don't do this. By allowing heavy industry like Rockwool, you're taking the entire state in the wrong direction. West Virginia has been fighting this for so long and we were finally making headway against industrial titans, we were finally moving away from coal, we were finally able to glimpse a light at the end of a tunnel. If you allow this to happen and let these heavy factories come into our towns and rape our lands like the Stone Mountain companies of the past. There is still a chance to do right by the people you are suppose to represent. Do the right thing, please help protect this place and these people who call it home. We are counting on you.

Please,

Mark Emmett Lannon II
Shepherdstown, 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

This change will absolutely negatively impact not only the immediate community in West Virginia but also be detrimental to Northern Virginia. It is hard to believe that looking at a map to see how many families, businesses and farms would be hurt by this.

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area. Please consider keeping Ranson beautiful and clean for all to enjoy, including your neighbors in Northern Virginia just over the state line who travel to West Virginia, support local businesses and the local economy. Keep Ranson and the surrounding area a great place for us to visit, and most importantly, PLEASE protect your citizens from the harmful emissions. Do not become a cancer cluster location, one sick resident is one too many.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and

understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Thank you for your time and consideration.

Sincerely,

Lydia M. Clark

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the City only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, *Stormwater Management Design in Karst Areas* states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Emily Hudkins

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Donna Lehman

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility

into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document *Stormwater Management Design in Karst Areas* states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed*. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this

water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

TESSA SCHAAF

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Cheryl Lannon

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Wally Minnick

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Crissy Fesperman
Charles Town, 25414-5507

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

I am sending a second email in regards to Shepherdstown, my home. Please vote NO11

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more

innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Thank you,

David J. Hark
Shepherdstown, 25443

To: spfaltzgraff@ransonwv.us; dpierson@ransonwv.us; gtaylor@ransonwv.us; scoulter@frontiernet.net; tgrant@ransonwv.us; astroud@ransonwv.us; andersonantS@aol.com; donhainessr@gmail.com
Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I urge you to vote NO on ordinance #2017-302, which would allow industry in Ranson that is not aligned with the city's comprehensive plan. This is a terrible proposal - and has united disparate segments of Jefferson County in opposition. You must voted NO on this proposal.

A vote to approve this proposal is a vote to KILL Jefferson County school children.

A vote to approve this proposal is a vote to terminate all agricultural business in Jefferson County.

A vote to approve this proposal is a vote to POISON Jefferson County air & water.

A vote to approve this proposal is a vote to crush all Jefferson County property values.

Simply put, if you vote for this proposal: you are a MURDERER; you are a JOB-KILLER; you are a LAND-POISONER; and, you actively want to crush the property value for all Jefferson County residents.

The Comprehensive Plan of Ranson under General Land Use Objectives states the following: "10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the manner which the City did in 2017, this designation enables industry that will kill hundreds (if not thousands) of Jefferson County residents. By now changing this additional land from new community to SDI, Ranson is actively working to kill as many Jefferson County residents as possible.

The industry that this rezoning will provide for produces significant amounts of pollution. This industry will kill the industries that are the pillars of our region's economy.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” The Council **MUST REJECT** this proposed zoning change.

Sincerely,

Todd Baldau

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

To Whom It May Concern,

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses

these industries, the resulting financial strain on these households will introduce additional stress and uncertainty into children's lives. Households living in areas affected by particulate matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

Children face increased exposure to air pollution, groundwater contamination, financial instability, and environmental discrimination if ordinance #2017-302 is passed. Please vote no on ordinance #2017-302.

Sincerely,

Christy Banks

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document *Stormwater Management Design in Karst Areas* states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed*, which the WVDEP cites in its own guiding document *Stormwater Management Design in Karst Areas*, clearly agrees stating

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.”

“The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.”

“...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed* states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst

hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM10, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM10!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided

for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Theresa Johnson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states. West Virginia, Virginia nor Maryland does not need industries like these to further pollute the air, water and decrease our quality of life. The long term damaging effect heavily outweighs the initial monetary gain for a few.

Thank you for your consideration and respect for health of the citizens in Ranson, West Virginia and Maryland.

Sincerely,

Walter Minnick
Hagerstown, 21740

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow. I have infant twins and live a mile from the plant. We bought our home here to raise our kids in a safe, rural environment. This should not be an industrial zone for the sake of my kids and children who live so close to the proposed zone

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is

supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst

hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided

for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Megan Burdi

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would generate large quantities of wastewater, stored on-site, in an area of known karst terrain. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in Ranson. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-30 will

preserve downstream water quality and ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Rebecca Kuhn

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Ralph Pagington

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I, Giovanni Zanabria, respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional stress and uncertainty into children's lives. Households living in areas affected by particulate

matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

Children face increased exposure to air pollution, groundwater contamination, financial instability, and environmental discrimination if ordinance #2017-302 is passed. Please vote no on ordinance #2017-302.

Sincerely,

Giovanni Zanabria

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I am a Northern Virginia resident and frequent visitor to Loudoun County. I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated

that the ground water adjacent to the site to be rezoned communicates readily with surface water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Dee Leggett

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated and average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way it is like an export. Not simply recycling money but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and Hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the view shed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements that usually

have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see, the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the *Atmospheric Environment* titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows: "Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy." People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in *Environment and Behavior* found Perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze. The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the ground water aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the ground water at the site is approximately 60 feet below the ground, and die tests performed by the USGS have shown that ground water from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles south east of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River. The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water

of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of peoples lives and that of their decedents for at least 3 generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county but the effects will be felt in every part of Ranson and the county.

The Comprehensive plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Andrew Cohen

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,
Terri Hartman

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly

earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income

living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. Please vote NO on Ordinance #2017-302.

Sincerely,

Randy Conrad

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on protection of surface water in Charles Town, risking the health, safety and welfare of the community.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality. The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant. Furthermore, the corrosive nature of chloride can cause damage to pipes both in the

wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wild life. This is being done with out representation of those it will affect the most. Please vote NO on Ordinance #2017-302.

Sincerely,

DOLORES WOJCIK

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Lori Robinson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Andrea Barron

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Rick Wight

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

I teach high school Environmental Science. I care about the future.

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Ann Andrex

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would generate large quantities of wastewater, stored on-site, in an area of known karst terrain. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in Ranson. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-30 will

preserve downstream water quality and ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Lawrence Neumark

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document *Stormwater Management Design in Karst Areas* states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed*, which the WVDEP cites in its own guiding document *Stormwater Management Design in Karst Areas*, clearly agrees stating

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.”

“The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.”

“...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed* states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst

hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM10, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM10!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided

for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

MARTIN BURKE
Shepherdstown, 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional

stress and uncertainty into children's lives. Households living in areas affected by particulate matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

Children face increased exposure to air pollution, groundwater contamination, financial instability, and environmental discrimination if ordinance #2017-302 is passed. Please vote no on ordinance #2017-302.

Sincerely,

Dennis Woolwine

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility

into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document *Stormwater Management Design in Karst Areas* states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed*. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this

water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

MARTIN BURKE

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

IT IS BOTH MINDBOGGLING AND UNCONSCIONABLE THAT YOU ARE EVEN CONSIDERING THIS. JUST DO YOUR JOB AND UPHOLD YOUR OWN COMPREHENSIVE PLAN. A VOTE TO AMEND MIGHT LEAD ONE TO BELIEVE THAT THERE WAS SOME MONETARY BENEFIT INVOLVED, AS THERE IS IN MANY BREACHES OF COMPREHENSIVE PLANS.

e: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Joan Henry

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated and average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way it is like an export. Not simply recycling money but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and Hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the view shed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements that usually

have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see, the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the *Atmospheric Environment* titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows: "Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy." People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in *Environment and Behavior* found Perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze. The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the ground water aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the ground water at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that ground water from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles south east of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River. The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water

of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of peoples lives and that of their decedents for at least 3 generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county but the effects will be felt in every part of Ranson and the county.

The Comprehensive plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Rhonda Zahn

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility

into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document *Stormwater Management Design in Karst Areas* states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed*. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this

water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Hillary Banachowski

The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Kaleigh Pierce

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document *Stormwater Management Design in Karst Areas* states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed*, which the WVDEP cites in its own guiding document *Stormwater Management Design in Karst Areas*, clearly agrees stating

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.”

“The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.”

“...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed* states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst

hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM10, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM10!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided

for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Paul Breitenbach

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I think that the information below does a good job of summarizing the reasons that the zoning for the RockWool Plant will negatively affect the health and well being of Ranson's citizens and the citizens of surrounding communities. People of all ages but especially children and the elderly will be negatively affected. These two most vulnerable populations are depending upon your vote against zoning that would allow the plant to be built and operated. The tourist industry will be negatively affected by a factory belching polluting fumes, the roads will be negatively affected by the increase in heavy vehicle traffic, the air we breath and the water we drink will be negatively affected . If you vote yes for heavy industry zoning you will be jeopardizing the health and welfare of the citizens who voted for you. There will be much better jobs for people in lighter, cleaner industries if you will attract them. Don't let RockWool treat you as they have treated third world countries, stand up for your citizens and say NO! we can do better than this. History will judge you by your vote. Please take the right side of history and lead Ranson and the surrounding communities into a future that you, your children and grandchildren and all of us can be proud of. Thank you.

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Tracy Coffman

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Mke Yoste
Shepherdstown , 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would generate large quantities of wastewater, stored on-site, in an area of known karst terrain. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in Ranson. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-30 will

preserve downstream water quality and ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Sandra Woiak

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Zoe Strassfield

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no! Our county does not want heavy industry. We moved here for clean air and a healthy environment for our families. Our water will be contaminated by Rockwool and our air will be destroyed. Many of us have enjoyed clean air since the heavy polluters in our area have been stopped by Covid-19. It shouldn't take a national pandemic to give us the environment that we chose when we first moved to Jefferson County.

Save our community. Vote no on #2017-302.

Regards,

Joanne Bario

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would generate large quantities of wastewater, stored on-site, in an area of known karst terrain. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in Ranson. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-30 will

preserve downstream water quality and ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated and average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way it is like an export. Not simply recycling money but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and Hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the view shed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements that usually

have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see, the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the *Atmospheric Environment* titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows: "Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy." People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in *Environment and Behavior* found Perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze. The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the ground water aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the ground water at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that ground water from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles south east of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River. The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water

of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of peoples lives and that of their decedents for at least 3 generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county but the effects will be felt in every part of Ranson and the county.

The Comprehensive plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Alex Vance

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I am reaching out to you today as I am worried for my beautiful town of Shepherdstown. The eastern panhandle of WV is one of the most beautiful areas in the nation. If you allow this zoning you are handing our resources and beauty away! We need your help!! I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson County will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson County at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Barbara Kandalis

Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

It was a terrible decision to even allow this type of industry in the area.

Sincerely,

Ronald Kijewski
Harpers Ferry, 25425

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

This land and this location are not appropriate for the industry this zoning change will allow. The hydrogeology of the land combined with such industrial activity risks the safety of our water supply. The air emissions from this industry will negatively impact our physical and mental health, our children's ability to achieve, our ability to make a living, our happiness, and it will do this for generations even after we leave or the pollution stops. It is not lost on us that this zoning change is being made next to our neighborhood and not next to the residents of Ranson, yet Ranson is in control. This is not right. We respectfully ask you to vote NO on ordinance #2017-302.

The land at the site in question is not just ill-suited, but completely inappropriate for the industry this zoning change will allow. This land has karst hydrogeology. As such, the ground itself is very unstable and readily develops sinkholes. This land has been described by a 2012 study to be exceptionally susceptible to sinkhole formation, more so than most of the rest of the county. Sinkholes provide point infiltration of surface water into the water in the epikarst. The porous bedrock allows diffuse infiltration of surface water into the epikarst water. At this site, there is also large amounts of water in the epikarst and it is only 60 feet from the surface. This allows the water at the surface to easily communicate with the water in the epikarst and the groundwater aquifer carrying any surface water contaminants with it.

The industrial activity this zoning change will allow for will cause ample surface water contamination from ground level industrial activities, raw material and waste storage and particulate matter falling to the ground from the air emissions. The industry that is currently planning to utilize this zoning change should be designated a stormwater hotspot just for this reason. The WVDEP should require them to treat all water before it is allowed to infiltrate the ground, but so far, this has not been done. The WVDEP actually recommends that areas like this not be developed due to the risk to groundwater. Their guiding document, *Stormwater Management Design in Karst Areas* states, "it is important to note that the potential for

geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that the best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” This guidance should be followed; clearly we cannot expect the DEP to protect us from inappropriate zoning changes.

The wellhead protection area for the Fox Glen’s well and that of the elementary school where our children go to school intersects with the land where the zoning change is being proposed. However, a USGS study has shown that the groundwater aquifer here moves relatively fast and so contamination throughout this property is a concern for our water quality. This zoning change will clearly endanger the safety of our water supply. If the well at Fox Glen is contaminated and the utility is forced to divert water from further away, this may be used as evidence at the Public Service Commission to raise the water tariff on Fox Glen residents. This is an increase many will not be able to afford, raising the risk of water insecurity.

The air emissions that will be produced by the industry that this zoning will allow include gaseous (SO_2 , NO_2 , O_3 (VOC and NO_x)), particulate matter (PM_{10} , $\text{PM}_{2.5}$, $\text{PM}_{0.1}$), and hazardous emissions (neurotoxins and carcinogens). We will be exposed through our lungs from the air we breathe, through our skin from the air and things we contact, and through contaminated things we may ingest. Our kids will be more exposed because they spend more time playing outside and on the ground and kids like to put things in their mouth. In fact, according to the National Academy of Science, our kids are more at risk because they breathe more air per pound than adults, their detoxification pathways are less mature, they are growing and developing and these processes are more sensitive, and they have more years to live yet and thus more years to develop slow onset diseases. Exposure to air pollution in early human development, especially exposure to fine particulate pollution, can be extremely deleterious to children's health and development.

The negative effects start in utero. Embryonic and fetal cells are exquisitely sensitive and are affected directly by inhaled pollutants that cross the placenta like fine particulate matter as well as other secondary pathways causing impaired organ development, disturbed development of the immune system, premature birth, lower birth weight, and increased infant mortality. These early changes lead to long-term effects including increased disease development in multiple organ systems throughout life, cognitive defects, achievement deficits, and negative psychological social and economic effects.

Fetal and early life exposure to air pollution causes inappropriate brain growth and maturation in early life, neurodevelopmental disorders, early cognitive deficits, and has been associated with autism by several case-control studies. Several studies have demonstrated a scholastic deficit in exposed children for almost all subject matter and at a variety of grade levels. The cause of these findings are multifactorial and researchers suggested they include exacerbation of asthma symptoms, other decreased health parameters, increased fatigue, increased absence, or a direct neurodegenerative effect, all caused by or contributed to by the exposure to air pollution.

Development of the respiratory system starts in utero, is 80% complete by age 6, and continues to early 20s. A review by Korten et. al. in 2017 explained that exposure to air pollution during the first 6 years of life can damage the lung tissue, impair lung growth, and alter the development of immune function and repair mechanisms within the lungs. These effects increase both short- and long-term risk for asthma, chronic obstructive pulmonary disease (COPD), lung cancer, and respiratory infections. Exposure to outdoor air pollution not only increased the risk of these diseases, but exacerbates existing disease increasing severity of symptoms, hospital visits, and death due to these diseases. A 2019 study found “even within the limits set by the World Health Organization, the pollutants PM10, SO2, NO2, and O3 are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” It is important to note that the US limits are set higher than the WHO, 300% higher in the case of PM10!

There are a multitude of other physiologic effects of air pollution that cause increased rates of morbidity and mortality in both adults and children. Air pollutants are associated with increased risk of autoimmune diseases like asthma, allergies, and eczema. Air pollution has deleterious effects on the cardiovascular system, endocrine system and blood, contributing to the occurrence of high blood pressure, high cholesterol, obesity, anemia, and stroke.

There are psychological effects as well. A review, of 178 published articles by Lu published in 2020, systematically examined the psychological (affective, cognitive, behavioral), economic, and social effects of air pollution and found: “Affectively, air pollution decreases happiness and life satisfaction, and increases annoyance, anxiety, mental disorders, self-harm, and suicide. Cognitively, it impairs cognitive functioning and decision making. Behaviorally, air pollution triggers avoidance behavior, defensive expenditure, and migration as coping strategies. Economically, it hurts work productivity and stock markets. Socially, it exacerbates criminal activities and worsens perception of the government. Importantly, both actual and perceived air pollution levels matter.”

Through negative physical and mental health effects air pollution has been shown to decrease an individual’s productivity and ability to participate in the workforce, negatively impacting workforce availability and overall productivity. This negatively impacts individual workers, companies, and the local economy. It also decreases individual’s ability to relocate themselves or their family into an area less affected by pollution. In this way a vicious cycle is set up where successive generations are exposed to the same pollutants and experience the negative effects of the ongoing exposure to pollution. This is not a fate the children of Fox Glen deserve to have thrust upon them by this zoning change and the industry that it will allow into our bucolic county. An editorial in the *New England Journal of Medicine*, commenting on several recent studies, stated: “The best control strategy from the standpoint of human health, supported by the scientific evidence to date, is to reduce the levels of all types of air pollutants. Our children’s health depends on it.”

The area surrounding the location, of the proposed zoning change that will accommodate heavier types of industry, is historically lower income and underserved. Deciding to locate a tract of such zoning in this location when it is on the whole unwanted and totally inappropriate for the land and surroundings is an example of environmental injustice. The Lancet Commission on Pollution and Health, citing the United Nation's Universal Declaration of 1948 on Human Rights, found that "pollution threatens fundamental human rights - the right to life, the right to health, the right to well-being, and the rights of the child." This rezoning represents not only a bygone era of economic development but a bygone era of environmental injustice and human rights violation.

The Lancet Commission on Pollution and Health further found that prevention of non-communicable diseases will require pollution prevention and that this will require fundamental changes in societal patterns of production, consumption, and transportation. This will require a paradigm shift to a more sustainable economic model based on recognition of human rights. They also found this is a major unexploited opportunity in society that many communities are grappling with undertaking. The movement away from the smart code zoning, with it integrated walkable communities, to large tracts of land dedicated to polluting industry close to a title one school is the exact opposite of this. This rezoning would represent a major step in the wrong direction for disease prevention, human rights, Ranson, and Jefferson County!

This change in zoning is not appropriate for this land and this area. This land itself is not well suited for the industry this zoning change would allow. This industry would severely adversely affect the health, safety and welfare of our community. Please vote NO on the Ordinance #2017-302.

Sincerely,

Caroline Baihly

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would generate large quantities of wastewater, stored on-site, in an area of known karst terrain. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in Ranson. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-30 will

preserve downstream water quality and ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Kristin Jackson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Mary Ozment
Mansfield, TX, 76064

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote NO on this ordinance, #2017-302. Any kind of zoning change like this endangers our children health and yours and mine. More information comes to light that pollution is causing our health to deteriorate. Our property values will decrease as industrial smoke stacks ascend above the green trees and overshadow the beauty of West Virginia's landscape.

Allowing the Rockwool facility to proceed with their illegal building is a reckless disregard of the residents wishes in this county. Whoever is in charge seems to care more about their own beliefs than those of the constituents of this county.

Federal dollars went to smart planning. And now Ranson violated the spirit of the comprehensive plan with NOT smart planning.

Rockwool can't put up facility 100 miles from nowhere? They had to do it right here in my backyard? And you're letting them. Why, for God's sake; someone tell me why. Was it the money?? It has to be the money. It's always the money.

Here's how you would know you made a right decision, if you had to pay Rockwool \$1 to put up a facility with smokestacks here, would you still do it? Of course not, because you know it would violate your responsibility to the people. But ohh the allure of money.

Do the right thing. Vote NO.

Sincerely,

James Williams

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Yocencia Deal
Shenandoah Junction, 25442

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Keith Stegall

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Cara Leitch

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

I am so grateful that I live in such a beautiful area. As a lifelong resident of WV, I have finally found a place where I would like to live out the rest of my years. Please help keep the beauty and character of this place that I call home.

Sincerely,

Kathleen Porter

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Karen Schnably

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

To add my personalized message, I fear for our water and air quality in this area for not only children and those with breathing problems, but also for all who live in this area.

Sincerely,

Barbara Hartman

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Shepherdstown is already reeling with the impact of COVID 19. Festivals including CATF have been canceled. Businesses are struggling to stay afloat. The further damage to our waters, vistas, and agrotourism caused by heavy industry will compromise the investments made by local communities to attract tourism dollars AND it will compromise the quality of life for residents of Berkeley and Jefferson counties.

Sincerely,

Leigh Ann Evanson
Shepherdstown, 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would generate large quantities of wastewater, stored on-site, in an area of known karst terrain. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in Ranson. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-30 will

preserve downstream water quality and ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Janet Barnes

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations.

The WVDEP recognizes development in karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more

appropriate locations.” Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the community by threatening the agriculture industry's ability to produce. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Melanie Pedri

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on protection of surface water in Charles Town, risking the health, safety and welfare of the community.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality.

The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant.

Furthermore, the corrosive nature of chloride can cause damage to pipes both in the wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wild life. This is being done with out representation of those it will affect the most. Please vote NO on Ordinance #2017-302.

Sincerely,

christopher kimball

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Western Loudoun County will lose valuable agricultural resources that will hurt all of the neighboring West Virginia Counties.

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Sady Godfrey

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Bonny Slater

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Erik Granrud

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the City only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, *Stormwater Management Design in Karst Areas* states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Keegan Woche

To: spfaltzgraff@ransonwv.us; dpierson@ransonwv.us; gtaylor@ransonwv.us; scoulter@frontiernet.net; tgrant@ransonwv.us; astroud@ransonwv.us; andersonantS@aol.com; donhainessr@gmail.com
Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would generate large quantities of wastewater, stored on-site, in an area of known karst terrain. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in Ranson. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-30 will

preserve downstream water quality and ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Donna McCullough

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

This land and this location are not appropriate for the industry this zoning change will allow. The hydrogeology of the land combined with such industrial activity risks the safety of our water supply. The air emissions from this industry will negatively impact our physical and mental health, our children's ability to achieve, our ability to make a living, our happiness, and it will do this for generations even after we leave or the pollution stops. It is not lost on us that this zoning change is being made next to our neighborhood and not next to the residents of Ranson, yet Ranson is in control. This is not right. We respectfully ask you to vote NO on ordinance #2017-302.

The land at the site in question is not just ill-suited, but completely inappropriate for the industry this zoning change will allow. This land has karst hydrogeology. As such, the ground itself is very unstable and readily develops sinkholes. This land has been described by a 2012 study to be exceptionally susceptible to sinkhole formation, more so than most of the rest of the county. Sinkholes provide point infiltration of surface water into the water in the epikarst. The porous bedrock allows diffuse infiltration of surface water into the epikarst water. At this site, there is also large amounts of water in the epikarst and it is only 60 feet from the surface. This allows the water at the surface to easily communicate with the water in the epikarst and the groundwater aquifer carrying any surface water contaminants with it.

The industrial activity this zoning change will allow for will cause ample surface water contamination from ground level industrial activities, raw material and waste storage and particulate matter falling to the ground from the air emissions. The industry that is currently planning to utilize this zoning change should be designated a stormwater hotspot just for this reason. The WVDEP should require them to treat all water before it is allowed to infiltrate the ground, but so far, this has not been done. The WVDEP actually recommends that areas like this not be developed due to the risk to groundwater. Their guiding document, *Stormwater Management Design in Karst Areas* states, "it is important to note that the potential for

geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that the best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” This guidance should be followed; clearly we cannot expect the DEP to protect us from inappropriate zoning changes.

The wellhead protection area for the Fox Glen’s well and that of the elementary school where our children go to school intersects with the land where the zoning change is being proposed. However, a USGS study has shown that the groundwater aquifer here moves relatively fast and so contamination throughout this property is a concern for our water quality. This zoning change will clearly endanger the safety of our water supply. If the well at Fox Glen is contaminated and the utility is forced to divert water from further away, this may be used as evidence at the Public Service Commission to raise the water tariff on Fox Glen residents. This is an increase many will not be able to afford, raising the risk of water insecurity.

The air emissions that will be produced by the industry that this zoning will allow include gaseous (SO_2 , NO_2 , O_3 (VOC and NO_x)), particulate matter (PM_{10} , $\text{PM}_{2.5}$, $\text{PM}_{0.1}$), and hazardous emissions (neurotoxins and carcinogens). We will be exposed through our lungs from the air we breathe, through our skin from the air and things we contact, and through contaminated things we may ingest. Our kids will be more exposed because they spend more time playing outside and on the ground and kids like to put things in their mouth. In fact, according to the National Academy of Science, our kids are more at risk because they breathe more air per pound than adults, their detoxification pathways are less mature, they are growing and developing and these processes are more sensitive, and they have more years to live yet and thus more years to develop slow onset diseases. Exposure to air pollution in early human development, especially exposure to fine particulate pollution, can be extremely deleterious to children's health and development.

The negative effects start in utero. Embryonic and fetal cells are exquisitely sensitive and are affected directly by inhaled pollutants that cross the placenta like fine particulate matter as well as other secondary pathways causing impaired organ development, disturbed development of the immune system, premature birth, lower birth weight, and increased infant mortality. These early changes lead to long-term effects including increased disease development in multiple organ systems throughout life, cognitive defects, achievement deficits, and negative psychological social and economic effects.

Fetal and early life exposure to air pollution causes inappropriate brain growth and maturation in early life, neurodevelopmental disorders, early cognitive deficits, and has been associated with autism by several case-control studies. Several studies have demonstrated a scholastic deficit in exposed children for almost all subject matter and at a variety of grade levels. The cause of these findings are multifactorial and researchers suggested they include exacerbation of asthma symptoms, other decreased health parameters, increased fatigue, increased absence, or a direct neurodegenerative effect, all caused by or contributed to by the exposure to air pollution.

Development of the respiratory system starts in utero, is 80% complete by age 6, and continues to early 20s. A review by Korten et. al. in 2017 explained that exposure to air pollution during the first 6 years of life can damage the lung tissue, impair lung growth, and alter the development of immune function and repair mechanisms within the lungs. These effects increase both short- and long-term risk for asthma, chronic obstructive pulmonary disease (COPD), lung cancer, and respiratory infections. Exposure to outdoor air pollution not only increased the risk of these diseases, but exacerbates existing disease increasing severity of symptoms, hospital visits, and death due to these diseases. A 2019 study found “even within the limits set by the World Health Organization, the pollutants PM10, SO2, NO2, and O3 are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” It is important to note that the US limits are set higher than the WHO, 300% higher in the case of PM10!

There are a multitude of other physiologic effects of air pollution that cause increased rates of morbidity and mortality in both adults and children. Air pollutants are associated with increased risk of autoimmune diseases like asthma, allergies, and eczema. Air pollution has deleterious effects on the cardiovascular system, endocrine system and blood, contributing to the occurrence of high blood pressure, high cholesterol, obesity, anemia, and stroke.

There are psychological effects as well. A review, of 178 published articles by Lu published in 2020, systematically examined the psychological (affective, cognitive, behavioral), economic, and social effects of air pollution and found: “Affectively, air pollution decreases happiness and life satisfaction, and increases annoyance, anxiety, mental disorders, self-harm, and suicide. Cognitively, it impairs cognitive functioning and decision making. Behaviorally, air pollution triggers avoidance behavior, defensive expenditure, and migration as coping strategies. Economically, it hurts work productivity and stock markets. Socially, it exacerbates criminal activities and worsens perception of the government. Importantly, both actual and perceived air pollution levels matter.”

Through negative physical and mental health effects air pollution has been shown to decrease an individual’s productivity and ability to participate in the workforce, negatively impacting workforce availability and overall productivity. This negatively impacts individual workers, companies, and the local economy. It also decreases individual’s ability to relocate themselves or their family into an area less affected by pollution. In this way a vicious cycle is set up where successive generations are exposed to the same pollutants and experience the negative effects of the ongoing exposure to pollution. This is not a fate the children of Fox Glen deserve to have thrust upon them by this zoning change and the industry that it will allow into our bucolic county. An editorial in the *New England Journal of Medicine*, commenting on several recent studies, stated: “The best control strategy from the standpoint of human health, supported by the scientific evidence to date, is to reduce the levels of all types of air pollutants. Our children’s health depends on it.”

The area surrounding the location, of the proposed zoning change that will accommodate heavier types of industry, is historically lower income and underserved. Deciding to locate a tract of such zoning in this location when it is on the whole unwanted and totally inappropriate for the land and surroundings is an example of environmental injustice. The Lancet Commission on Pollution and Health, citing the United Nation's Universal Declaration of 1948 on Human Rights, found that "pollution threatens fundamental human rights - the right to life, the right to health, the right to well-being, and the rights of the child." This rezoning represents not only a bygone era of economic development but a bygone era of environmental injustice and human rights violation.

The Lancet Commission on Pollution and Health further found that prevention of non-communicable diseases will require pollution prevention and that this will require fundamental changes in societal patterns of production, consumption, and transportation. This will require a paradigm shift to a more sustainable economic model based on recognition of human rights. They also found this is a major unexploited opportunity in society that many communities are grappling with undertaking. The movement away from the smart code zoning, with it integrated walkable communities, to large tracts of land dedicated to polluting industry close to a title one school is the exact opposite of this. This rezoning would represent a major step in the wrong direction for disease prevention, human rights, Ranson, and Jefferson County!

This change in zoning is not appropriate for this land and this area. This land itself is not well suited for the industry this zoning change would allow. This industry would severely adversely affect the health, safety and welfare of our community. Please vote NO on the Ordinance #2017-302.

Sincerely,

Jacqueline Moreno

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Cait
Harpers Ferry, 25425

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on protection of surface water in Charles Town, risking the health, safety and welfare of the community.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality.

The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant.

Furthermore, the corrosive nature of chloride can cause damage to pipes both in the wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wild life. This is being done with out representation of those it will affect the most. Please vote NO on Ordinance #2017-302.

Sincerely,

Isabel Montana

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Kelly Hoover

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302. This factory should NEVER have been approved! It will negatively impact thousands of people and children including my own family. This is your chance to make this right.

Sincerely,

May Oaks

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly

earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income

living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. Please vote NO on Ordinance #2017-302.

Sincerely,

Lee Couchenour

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Carolyn Sisler

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly

earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income

living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would generate large quantities of wastewater, stored on-site, in an area of known karst terrain. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in Ranson. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-30 will

preserve downstream water quality and ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Laura Calvert

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

I have been riding horses for 30 years. I have gone from show kid to working at the racetrack (grooming, ponying, and owning racehorses) and will more than likely transition to show mom for my 2yo horse loving child. My husband has 20 in training at Charles Town, and I am an assistant at a prominent local breeding farm. Horses literally are our way of life! Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry.

I have been riding horses for the last 30 years.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool.

An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. Please vote NO on Ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Debra Anderson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on protection of surface water in Charles Town, risking the health, safety and welfare of the community.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality.

The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant.

Furthermore, the corrosive nature of chloride can cause damage to pipes both in the wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wild life. This is being done with out representation of those it will affect the most. Please vote NO on Ordinance #2017-302.

Sincerely,

Mary Vandevander

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Jim McCormack

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Living 2 miles from site and working in Charles town I pass the mess daily. My family is getting hit in all directions. First and foremost my 2 year old daughter will have to grow up and spend much of her life breathing the air. In 30-40 years the cumulative effects of the contaminants will be detrimental to her health. Of course the air can be declared healthy at one moment. The cumulative effects will be deadly for all my family. Second, my living is made with racehorses. All kinds of studies have shown how this industry will be negatively impacted. Third, life savings in our home and 25 acres. Property value will drop. Lastly, what a horrible look for this area. The pretty drive in route 9 every morning will be interrupted by this monstrosity. Who in their right mind could have thought this business for here? : #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous estevelles and large amounts of water in the epikarst. This water is easily contaminated and this contamination

spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater

General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be

negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses' health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Anthony Lucas

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional

stress and uncertainty into children's lives. Households living in areas affected by particulate matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

Children face increased exposure to air pollution, groundwater contamination, financial instability, and environmental discrimination if ordinance #2017-302 is passed. Please vote no on ordinance #2017-302.

Sincerely,

Jordan B

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Charles Abel

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on protection of surface water in Charles Town, risking the health, safety and welfare of the community.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality.

The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant.

Furthermore, the corrosive nature of chloride can cause damage to pipes both in the wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wild life. This is being done with out representation of those it will affect the most. Please vote NO on Ordinance #2017-302.

Sincerely,

Stephanie D

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Emily Chiappinelli

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. In addition, it allows in many threats to our community's health, economy and general well being.

I trust that you have heard what the scientists have found with regard to the hazards for our air, water and physical health (human and animal) of having industry in Ranson. I trust that you have heard from local, often long term, business owners whose livelihoods will be impacted negatively. I trust that you have heard from people with children at risk that go to the elementary school across the street from the proposed site. I trust that you have heard from the people that live near the site and will be harmed by what industry would do to their air, water and quality of life,

For all of those reasons, I oppose industry in Ranson. But, I have a personal experience to share as well. I lived in a town where many people dies as a result of the attacks on 9/11. We lived close enough to NYC that we were able to see smoke from the buildings from our town. We worried about the air, as many people that had issues like asthma were having trouble and irritation long after the attack. The head of the EPA at the time, Christine Todd Whitman, assured everyone that it was safe. For years, there were assurances it was safe. She has gone on record, only within the past few years, after far too many deaths, to say she was wrong. The victims had to fight for years, often dying before there was any acknowledgement of the harm that was caused. While industry in Ranson is not 9/11, it is the same in the way that it is dangerous for the people around it. We need to admit that now, before anyone gets sick.

For us after 9/11, we saw what was happening and made the choice to come somewhere that people cared about the environment, the Eastern Panhandle in West Virginia. We based our decision on the green space, and the economy supported by tourism and farming. Allowing industry in Ranson would negate all of the reasons that we chose this part of the state to live 17

years ago. And, it would set up another catastrophe where the EPA may say one thing, but their technical allocations are not in keeping with a healthy life, especially for children.

An accompanying issue is my own health. Since I was a teen, I have had a chronic health condition. Under doctors orders I try to eat a clean diet, meaning the local farms and my backyard garden, supply a vast amount of my food. I am sensitive to things that many people aren't. When exposed to too many things like pesticides, my body swells and I have trouble functioning. With the new changes to Ranson based on the original comprehensive plan, I happily go to Charles Town's farm-connected markets and the accompanying Ranson stores. It has become a welcoming place for people, even those of us with health concerns. Spreading industry over that healthy agricultural environment sends a strong signal that you value corporations over the health of people and their community.

Finally, there are too many examples of corporations making people pay the ultimate price for corporation injustices. Just this week, Proctor and Gamble admitted to killing 84 people outright. The most this corporation, that makes around \$50 billion in sales annually will pay, is 3.5 million for killing 84 people and wiping out 90 percent of a small town. And this is one example where they admitted it. But, usually it's many years in court fighting to be heard while the corporation poisons and denies. Raw sewage in our river, pollutants from airport and auto traffic, pollution from industry in Martinsburg, are all issues we must already contend with and try to remedy. We do not need or want industry bad practices or "accidents" in our community or anywhere near our children.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Tracy Riordan
Shepherdstown, 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly

earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income

living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. Please vote NO on Ordinance #2017-302.

Sincerely,

patricia willis

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document *Stormwater Management Design in Karst Areas* states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed*, which the WVDEP cites in its own guiding document *Stormwater Management Design in Karst Areas*, clearly agrees stating

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.”

“The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.”

“...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the *CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed* states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst

hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM10, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM10!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided

for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Ray Walls

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Sam Bodkin

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Elizabeth McGowen
Shepherdstown , 25443

Sent: 6/16/2020 20:09
To: spfaltzgraff@ransonwv.us; dpierson@ransonwv.us; gtaylor@ransonwv.us; scoulter@frontiernet.net; tgrant@ransonwv.us; astroud@ransonwv.us; andersonantS@aol.com; donhainessr@gmail.com
Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Julia Cooper

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Guy Pagli

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

VOTE NO!

You are representatives of the people in this area. You should be looking out for the best for your people. The best health, the safest water, the most beautiful area and the most flourishing economy. You had it all and a wonderful development plan to lead us into the future but that vision, the vision we want for the county, has been sweep aside in the name of greed.

Rockwell and its' like will only bring disease, pollution and ruin to this fragile corner of WV. You have a chance to right the wrong done and set the county back on to a brighter road.

VOTE NO!

Sincerely,

Julia T. Anthony

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Samantha Zurbuch

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Pam Roberts

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Rachel Meyer

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I had the honor of teaching the staff and students at North Jefferson Elementary several years ago. They are a very special community.

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local

agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional stress and uncertainty into children's lives. Households living in areas affected by particulate matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

Children face increased exposure to air pollution, groundwater contamination, financial instability, and environmental discrimination if ordinance #2017-302 is passed. Please vote no on ordinance #2017-302.

Sincerely,

Diana Brubaker

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated and average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way it is like an export. Not simply recycling money but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and Hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the view shed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements that usually

have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see, the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the *Atmospheric Environment* titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows: "Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy." People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in *Environment and Behavior* found Perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze. The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the ground water aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the ground water at the site is approximately 60 feet below the ground, and die tests performed by the USGS have shown that ground water from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles south east of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River. The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water

of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of peoples lives and that of their decedents for at least 3 generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county but the effects will be felt in every part of Ranson and the county.

The Comprehensive plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Eric Hansen

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly

earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income

living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. Please vote NO on Ordinance #2017-302.

Sincerely,

Janet deTeran

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will allow for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The Corona Virus pandemic has made it abundantly clear that the industrial agriculture system in the United States is very fragile due to long and complex supply chains. We have little resiliency in our food system. WV literally imports water from drought-stricken California because of the large amount of agricultural products we import from that state. Jefferson County has a rich agriculture heritage dating back hundreds of years. We could provide a large share of food needed by residents from the right mix of agricultural producers right here. At a time of great health and economic insecurity, we all owe it to our families and our neighbors to do our part to create and nurture a resilient local food system. The arrival of heavy industry in our valley jeopardizes our air and water and puts our entire agricultural industry at risk.

According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products. Our agriculture industry should be considered part of our critical industrial base.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pastureland, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the downstream supply chain as well as the consumer.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations.

The WVDEP recognizes development in karst areas puts water resources at high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development

occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the agricultural industry in Jefferson County. For geographic and economic reasons, it is simply not feasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for.

A vote for this zoning change is a vote against the residents of Jefferson County. It is a vote to put our local agricultural industry at risk at a time when the US food system is under tremendous pressure, a time when we will be forced to rely increasingly on locally produced food. It is not an act of a good neighbor. If you proceed with this ill-advised zoning change, Ranson should not be surprised to be treated like any other bad neighbor who endangers the health and livelihood of its neighbors.

I request that you vote no on the ordinance #2017-302.

Sincerely,

Diane Blust

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Kristin Ainsworth

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Carrie Singer
Shepherdstown, 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional

stress and uncertainty into children's lives. Households living in areas affected by particulate matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

Children face increased exposure to air pollution, groundwater contamination, financial instability, and environmental discrimination if ordinance #2017-302 is passed. Please vote no on ordinance #2017-302.

Sincerely,

Lauren Chandler

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Dana Belanger

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The city has failed to address the latter part of this objective. By Changing the SDI in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and child hood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health, and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and overall earnings for owners, breeders, and

trainers. This group provides over 70 million dollars in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. This industry would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitorship and again decreasing return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up this industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the Karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive plan is clear the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Brian Macbean

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional

stress and uncertainty into children's lives. Households living in areas affected by particulate matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

Children face increased exposure to air pollution, groundwater contamination, financial instability, and environmental discrimination if ordinance #2017-302 is passed. Please vote no on ordinance #2017-302.

Sincerely,

Jessica Hawkins

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Anthony Bonitz

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Daniel Bava

To: spfaltzgraff@ransonwv.us; dpierson@ransonwv.us; gtaylor@ransonwv.us; scoulter@frontiernet.net; tgrant@ransonwv.us; astroud@ransonwv.us; andersonantS@aol.com; donhainessr@gmail.com
Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Kerri Hesley, M.D.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

Further, understand that if you cannot be trusted to represent the will of the people in the community, then you clearly cannot be trusted to tell the truth about the safety of heavy industry. Further, this community is at the headwaters of the Potomac. Heavy industrial pollution contaminating the drinking water of West Virginia, Maryland, Virginia, DC and Federal areas is no way to “win friends” in the area. It ensures a nightmare political scenario for any industry stupid enough to engage in the practice. Even if I were on the board of such a corporation I would vote no because of the permanent cloud it would put on the business.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Wilbert Starks

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Mary Hess

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

I live downstream. Your actions affect not just Jefferson County. Your actions will also influence where I take my business. I won't spend my money on a dirty place.

Sincerely,

Katie

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Laura Dawson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Susan Sherba

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. We moved here up on the mountain off Mission Road to be part of a community that celebrates and works to preserve and sustain the beauty and bounty of the natural resources of West Virginia. We work hard to sustain and improve the quality and resilience of forested land and the health of the watershed. Jefferson County should be working toward Land Use Objectives that contribute to the health, safety and welfare of the entire community - the children, the farmers, the businesses that rely on tourists, and the land itself. If we continue to put the natural resources of this land at risk and make choices that lead us down the path of more and more heavy industry we will lose the very benefits that make Jefferson County such a desirable place to live and work and raise children and visit.

This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects

are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer

development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Linda J DeGraf

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Mallory Smith

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Kathryn Schroeck

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-30 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

This whole process was intended to be covert and slip past the citizens that would be affected by this heavy industry. The original plan to make a mixed use residential and light industry in conjunction with the Amtrak station would be a far better benefit to local residents.

Sincerely,

Roger Rishek

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Hello,

I am a Shepherdstown resident of 5 years. One of the main reasons I moved into this beautiful county is because it did not have this type of industry. I grew up in the Kanawha Valley and do not want the same environmental/health problems that remain a consistent issue there to be repeated for my daughter here.

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Sarah Lannon

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The comprehensive plan of Ranson is clear: it states, "the City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." This land is ill-suited for an industrial facility due to its location and hydrogeology. Further, the industry that this zoning change will allow for will adversely affect the health, safety, and welfare of the community through its affect on the agricultural industry.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the

bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer. In this way, this zoning change will adversely affect the welfare of the community.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas

states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for. This land is clearly ill-suited for industrial use and should not be zoned for it.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Karen Henry

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Sheherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to more reactive to sudden changes relative to manufacturing

businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Cheryl Gordon

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Marsha Wassel

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Jayne Harris

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly

earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income

living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. Please vote NO on Ordinance #2017-302.

Sincerely,

MAurice Casey

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Cori Berlin

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

I live two miles from Ground Zero although I have a Charles Town address because of the pipestem annexation - we are an island within "Ranson". I have already had cancer twice and the idea that our well water is sure to be poisoned as well as our air, this whole thing is terrifying and horrible. We will eventually move from here because of Rockwool. Your decision to change the zoning does not represent what Jefferson County wants. NO HEAVY INDUSTRY!!!

Sincerely,

Jill Guempel
Charles Town, WV

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents. I personally have asthma and for many residents like me, this pollution would worsen my condition.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Zachary Wandalowski
Smithsburg , 21783

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The comprehensive plan of Ranson is clear: it states, "the City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." This land is ill-suited for an industrial facility due to its location and hydrogeology. Further, the industry that this zoning change will allow for will adversely affect the health, safety, and welfare of the community through its affect on the agricultural industry.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the

bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer. In this way, this zoning change will adversely affect the welfare of the community.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas

states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for. This land is clearly ill-suited for industrial use and should not be zoned for it.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Sophia Maravell

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

danielle Wohlgemuth

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Susan Hewitt

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Robert Brown

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Peter Brown

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Marjorie Siegelman

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on the wastewater treatment systems, burden the rate payers and risk surface waterways in Charles Town, risking the health, safety and welfare of the community. The comprehensive plan of Ranson states, the City "will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." Therefore, please vote NO on #2017-302.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and

beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant. Furthermore, the corrosive nature of chloride can cause damage to pipes both in the wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system. Through these effects, the industry this zoning will provide for will adversely effect the health, safety, and welfare of the community.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the

proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wild life. Through these effects, the industry this zoning would allow will adversely effect the health, safety, and welfare of our community. This is being done with out representation of those it will affect the most. Please vote No on Ordinance #2017-302.

Sincerely,

Deb Zeeman

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudoun and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Donna Bath

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Jordan Gainer

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Lisa Chiappinelli Sutherland

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Ranson and Jefferson County had a plan for that would support growth in a way supportive of productive communities and healthy population growth. Instead of that, outside influences have targeted Jefferson Orchards as a location for deceptively-labeled, polluting industry, heavy truck traffic, and a relatively small number of low-paying jobs. Approval was slipped "under the radar" without most local people learning about it and then we were told "it is too late to change - you are stuck with it - democracy is not a concern." But it is NOT too late - those who slipped it in missed an important step in zoning and now it must be reconsidered, this time with the people knowing the facts!

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during

these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer

development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The comprehensive plan of Ranson is clear: it states, "the City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." This land is ill-suited for an industrial facility due to its location and hydrogeology. Further, the industry that this zoning change will allow for will adversely affect the health, safety, and welfare of the community through its affect on the agricultural industry.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the

bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer. In this way, this zoning change will adversely affect the welfare of the community.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas

states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for. This land is clearly ill-suited for industrial use and should not be zoned for it.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Lisa Sutherland

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. In this way, this zoning change and the industry it will provide for will adversely affect the welfare

of the community. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed. Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents. I frequently kayak on the Potomac River, so this will have an impact on my activities.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I have two grandchildren that live in Charles Town with my daughter. My daughter and my former spouse also very frequently babysit four other grandchildren of mine. Your action will directly impact the health of these children, as well as countless other citizens of both West Virginia and Maryland.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Jeffrey Russell

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Danielle Duvall

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I am a mother, grandmother, and retired Jefferson County elementary teacher. I have lived in Jefferson County for 44 years. I taught here for 23 years, some of those years were spent teaching 5th grade at North Jefferson Elementary School which is directly across from the rezoning site. My vocation as an educator, mother, and grandmother was and is to care for the health, safety, and well-being of the whole person, including mind, body, and soul. This ordinance #2017-302 will affect the health, safety, and welfare of our children and families. It does not align with the comprehensive plan: "...the City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on

ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional stress and uncertainty into children's lives. Households living in areas affected by particulate matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." This zoning change would clearly adversely affect the health, safety, and welfare of the community. Children face increased exposure to air pollution adversely affecting their health, financial instability adversely affecting their welfare, groundwater contamination adversely affecting their safety, and environmental injustice and discrimination if ordinance #2017-302 is passed. Educators will face increased air pollution adversely affecting their health and consequently welfare. These adverse effects are all against Ranson's Comprehensive Plan. Please vote NO on Ordinance #2017-302.

Sincerely,

Paula Tremba

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Sarah Middlemiss

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Jeffery Sedoti

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudoun and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Elizabeth Ricketts

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

CHERYL GUERRERO

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Donna Joy

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Please vote no on #2017-302. Protect Jefferson County and the residents from the damage of allowing industrial zoning. We deserve a plan that works with us, our health, tourism, agriculture, environment rather than investing in dismantling all we hold dear.

Sincerely,

Katherine Hark

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302.

I breed horses within 2 miles of the proposed site. If Rockwool is successful, i will have to move my business from this area. I will take the Ranson off my list of potential areas where I would purchase a farm due to the health dangers posed by the plant.

Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models,

these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers,

small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning

change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302." ; "" ; ""

19:12:55" ; "" ; "1" ; "I have been riding horses for 30 years. I have gone from show kid to working at the racetrack (grooming, ponying, and owning racehorses) and will more than likely transition to show mom for my 2yo horse loving child. My husband has 20 in training at Charles Town, and I am an assistant at a prominent local breeding farm. Horses literally are our way of life! Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the groundwater supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased recovery times following racing (7,11). Reduced performance and training interruptions can

lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state owners and breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry.

I have been riding horses for the last 30 years.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of

total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of full-time, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. Please vote NO on Ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

John Dittmann

Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

As a recent resident and a current property owner in Jefferson County, I am appalled that this plan to include heavy industry to Jefferson County is being considered. I feel much the harm to the health of the people will be too much. Since Ranson has accepted grants in the past to make a green community, if they allow this zoning for heavy industry, they should return all of that grant money to the government.

Sincerely,

Cathy Jackson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Rachel Zayas
Hagerstown, 21740

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I am a Shepherdstown resident of 5 years. One of the main reasons I moved into this beautiful county is because it did not have this type of industry. I grew up in the Kanawha Valley and do not want the same environmental/health problems that remain a consistent issue there to be repeated for my daughter here.

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving

industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Brianna barger

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Emily Bobotas

In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Jennifer Gerholdt

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Natalie Tentindo

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would put at risk the health and well being of children of Jefferson County.

The type of industry that ordinance #2017-302 would allow in Ranson would generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. Exposure to these pollutants has devastating effects on children's health. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. Developing fetuses whose mothers are exposed to air pollution are more likely to have impaired organ development which can lead to early cognitive deficits, neurodevelopmental defects and other physical, cognitive, and psychological deficits later in life. An association between autism and prenatal exposure to particulate matter in air pollution has been demonstrated in several studies. Many studies have shown that lower test scores in math, English, and language arts are associated with exposure to outdoor air pollution. Industrial activity allowed by ordinance #2017-302 would also increase the risk of groundwater contamination in Ranson and nearby municipalities. Children whose families rely on well water, as is the case in much of Jefferson County, may be affected by polluted water. Voting no on ordinance #2017-302 will prevent air and water pollution from negatively affecting the long-term health of children in Jefferson County and surrounding areas.

The economic and environmental harm caused by the type of industry that ordinance #2017-302 would allow would put additional stress on the parents, caretakers, and teachers of children in affected areas. The weakening and destabilizing of this support network would have negative effects on local children. Many households in Jefferson County depend on the local agriculture, tourism, and equine industries for income. If industrial activity in Ranson depresses these industries, the resulting financial strain on these households will introduce additional stress and uncertainty into children's lives. Households living in areas affected by particulate

matter and regional haze will also suffer from the psychological effects of air pollution. Individuals living in areas with increase perception of pollution show increased levels of stress, anxiety, and unhappiness. School districts affected by increased air and water pollution may have trouble recruiting and retaining teachers. Teachers have a large influence on a child's daily life and, if educator quality and tenure decreases, the quality of this influence will diminish.

The site of the proposed rezoning in Ranson is across the road from an elementary school and proximal to lower-income neighborhoods. Observations like these demonstrate how ordinance #2017-302 would disproportionately affect vulnerable and historically-disadvantaged populations. The damaging health effects of air pollution have been shown to persist for at least three generations, so allowing certain types of industry in low-income areas would only compound existing disadvantages. Voting no on ordinance #2017-302 would be a step towards acknowledging that all individuals have the right to clean air and water.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." This zoning change would clearly adversely affect the health, safety, and welfare of the community. Children face increased exposure to air pollution adversely affecting their health, financial instability adversely affecting their welfare, groundwater contamination adversely affecting their safety, and environmental injustice and discrimination if ordinance #2017-302 is passed. Educators will face increased air pollution adversely affecting their health and consequently welfare. These adverse effects are all against Ranson's Comprehensive Plan. Please vote NO on Ordinance #2017-302.

Sincerely,

Matthew Patterson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I am a Jefferson County resident who owns a small farm I'm Shenandoah Junction. I value the integrity of the agricultural land, and that is why I loved my family here 8 years ago.

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The comprehensive plan of Ranson is clear: it states, "the City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." This land is ill-suited for an industrial facility due to its location and hydrogeology. Further, the industry that this zoning change will allow for will adversely affect the health, safety, and welfare of the community through its affect on the agricultural industry.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer. In this way, this zoning change will adversely affect the welfare of the community.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community.

The WVDEP recognizes development in karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for. This land is clearly ill-suited for industrial use and should not be zoned for it.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Sarah Santacroce

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Melissa Viteri

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302. Sincerely,

Nathan Dekker

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

My Comment:

I have lived here for 13 years. We moved here to get away from the sprawling development in Montgomery Co Md. Please don't let this get started in Jefferson Co. We and everyone we know wants NO HEAVY INDUSTRY in Jefferson Co. WV

Sincerely,

John Cisar

The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Nancy Gordon

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on this ordinance. There are many businesses along 115 that I go to in support - e.g, Mildred Street Deli, Southern States, the Business Center. To get to these businesses from my home I take route 9 to the 115 exit. It's a beautiful drive and I like to support the small businesses rather than the big box stores and chains. What a shame it would be to drive customers like me away from Ranson because the traffic on route 9 has become unbearable from the noise and number of trucks. I can shop in Charles town or Martinsburg but I've always preferred Ranson if possible. I don't know how you can think that this ordinance is going to be good for the town considering the last business from customers who no longer want to use route 9 and 115 exit.

Sincerely,

Elise Baach

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

MaryLou Cisar

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous estavelles and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Danielle Patterson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Cynthia Cooper

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown.

I strongly believe that planning development in the Eastern Panhandle needs to consider that there already exists industrial sites in Martinburg and Tabler Station. Those areas are already established and offer jobs close by to residents of Ranson. The unintended consequence of industry in Jefferson County is too risky and too burdensome for a county that prides itself on its agricultural history. It is unique in WV for having so much flat agricultural and I think our descendants will regret that we used up too much of it for McMansions and Industry right at the moment when the signs of environmental injustice were all around us. History will not thank you for copying the same destructive development plan as other counties.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types of industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will

protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County.

I again request that you vote no on ordinance #2017-302. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Laura PICARD CARTER

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Adam Schroeck

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The comprehensive plan of Ranson is clear: it states, "the City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." This land is ill-suited for an industrial facility due to its location and hydrogeology. Further, the industry that this zoning change will allow for will adversely affect the health, safety, and welfare of the community through its affect on the agricultural industry.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the

bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer. In this way, this zoning change will adversely affect the welfare of the community.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas

states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for. This land is clearly ill-suited for industrial use and should not be zoned for it.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Frances Prott

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on the wastewater treatment systems, burden the rate payers and risk surface waterways in Charles Town, risking the health, safety and welfare of the community. The comprehensive plan of Ranson states, the City "will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." Therefore, please vote NO on #2017-302.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and

beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant. Furthermore, the corrosive nature of chloride can cause damage to pipes both in the wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system. Through these effects, the industry this zoning will provide for will adversely effect the health, safety, and welfare of the community.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the

proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wild life. Through these effects, the industry this zoning would allow will adversely effect the health, safety, and welfare of our community. This is being done with out representation of those it will affect the most. Please vote No on Ordinance #2017-302.

Sincerely,

Katie Schroeck

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Les Johnson

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Kerry Krogstad
Shepherdstown , 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Susan Benjamin

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Catherine Grim
Harpers Ferry, 25425-6298

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Maggie Day

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Rebecca Lidgerding
Shepherdstown , 25443

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

george baker

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudon and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Catherine Stevens

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote NO on Ordinance #2017-302. This rezoning will put an undue hardship on the wastewater treatment systems, burden the rate payers and risk surface waterways in Charles Town, risking the health, safety and welfare of the community. The comprehensive plan of Ranson states, the City "will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." Therefore, please vote NO on #2017-302.

The nature of the industry that this zoning will allow will be harmful to our local economy. Charles Town has spent a lot of time and money improving our downtown area for restaurants and retail. We are working to take advantage of the tourism industry in our county and bring more people into Charles Town. The eye sore, noise pollution, air pollution, and obvious move away from sustainability will drive people away from Jefferson County and Charles Town, rendering our efforts ineffective and unrewarding. This will make it harder for our small businesses to be successful. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

According to the 2018 WVU economic study of the eastern panhandle, over 40% of the workforce in Jefferson County choose to work outside of the state. These commuters bring that money home and spend it here supporting our local small businesses, economy and government. Charles Town has a large number of residents who commute. These typically higher earners may choose to leave the area because of the presence of the industry that this zoning change would provide for. This will cause a hardship on our economy and municipality. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The industry that this zoning will allow will cause stress for multiple reasons on the Charles Town wastewater treatment systems and the surface waterways in Jefferson County and

beyond. The industry currently planning to utilize the zoning change will have discharge to the wastewater system that is high in chloride, primarily from its water softening system. The NPDES permit modification allows up to 5,000 mg/L. Chloride is not settled or removed at the wastewater treatment plant. It cannot be removed by conventional means and would be prohibitively expensive to do by new technology. This is of concern to Charles Town because chloride can harm stream water and also impair functioning of the wastewater treatment plant. Furthermore, the corrosive nature of chloride can cause damage to pipes both in the wastewater system and those used by downstream drinking water systems, like the \$207 million Trap Rock Water Treatment plant in Loudoun.

The human health criteria for chloride under WV standards is 250 mg/L. Under low stream flow conditions, chloride additions to the treatment plant effluent, as proposed by the industry currently planning to utilize the zoning change, could cause chloride levels in Evitts Run to exceed this standard. If the amount of chloride increased due to expansion or higher throughput, then this human health standard would be violated frequently. Chlorides are also known to harm aquatic life and effect metal toxicity in rivers. The USEPA and several states have surface water guidelines of 230mg/L for chronic exposure. This would also pose a risk of damaging the water treatment facilities downstream on the Potomac River.

A research study by Lefebvre and Moletta in 2006 showed that chloride and salinity impair the ability of wastewater treatment to remove phosphorus and nitrogen, and because of this, other states have introduced legislation to treat saline wastewater. Uygur and Kargi in 2004 looked at the effects of salt on synthetic wastewater treatment. They found that removal of both nitrogen and phosphorus was reduced when salinity increased from 0 to 6%. In fact, the removal efficiency of ammonia dropped from 96% to 39% with this increasing salinity. Hong et al. In 2016 found phosphorous removal decreased 20-28% when chloride concentrations went from 150 mg/L to 1,500 mg/L. Phosphorous removal was completely inhibited at concentrations greater than 2,500 mg/L. This increased salinity has the potential to make the Charles Town wastewater treatment system work far less efficiently.

In addition to the contents of the wastewater this type of industry will produce, the volume of sewage is itself a concern. Given that the City of Charles Town has been in violation of its permit on numerous occasions for spills and overflow of untreated sewage, adding large volumes of wastewater will further challenge the near capacity system. This will mean that costly capacity upgrades will need to be done likely sooner than they would have needed to be done, imposing further financial strain on the system. Through these effects, the industry this zoning will provide for will adversely effect the health, safety, and welfare of the community.

This zoning change will provide for industry the likes of which are not present in this county and have not been present in this county for many decades. We find it appalling that the introduction of zoning for such industry is being done in an area of the county that is historically underserved and lower income. It is even more egregious because the worst effects including air pollution and groundwater contamination will be felt first and most severely in the immediate vicinity, and Ranson does not even have residents in the immediate vicinity of the

proposed zoning change. This decision is being contemplated without representation of those who will be most affected. This would be a deplorable example of environmental injustice.

This zoning will provide for industry that will harm our economy, drive away residents, challenge and or damage our infrastructure, and may damage our waterways and wild life. Through these effects, the industry this zoning would allow will adversely effect the health, safety, and welfare of our community. This is being done with out representation of those it will affect the most. Please vote No on Ordinance #2017-302.

Sincerely,

Ryan Hussong

To: spfaltzgraff@ransonwv.us; dpierson@ransonwv.us; gtaylor@ransonwv.us; scoulter@frontiernet.net; tgrant@ransonwv.us; astroud@ransonwv.us; andersonantS@aol.com; donhainessr@gmail.com
Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would have a negative effect on water and air quality in neighboring states such as Maryland.

The Potomac River provides drinking water and a source of recreation to Maryland residents. Water and air pollution generated within the Potomac River's watershed will inevitably contaminate this valuable waterway. The site of the proposed zoning change in Ranson is located within the Potomac River Watershed.

The type of industry that ordinance #2017-302 would allow in Ranson would utilize large water impoundments, in an area of known karst terrain. This water will be contaminant from several sources including particulate mater that has fallen out from the air emissions and process water. The West Virginia Department of Environmental Protection has published guidelines that specifically discourage extensive development in areas of karst terrain because of the vulnerability of karst aquifers to contamination by surface pollution. Karst features increase surface water and groundwater connectivity and any spills or surface releases quickly percolate into the groundwater. Additionally, sinkholes are common in karst terrain and can cause ruptures in wastewater impoundments. Even if appropriate attempts are made to contain and manage wastewater and other stormwater runoff on-site, there is still a high risk that wastewater could contaminate the groundwater through tears and catastrophic failure of wastewater impoundments. Contaminated groundwater in karst terrain can easily resurface in waterways several miles away, as shown by a USGS tracer study conducted near the site in to be rezoned. The USGS study detected tracer dye in multiple springs and waterways miles from the initial injection site in Ranson. All of these waterways drain into the Potomac River.

Mismanagement of wastewater could also lead to contamination of nearby surface waters. For example, the site of the proposed rezoning in Ranson is in the Rocky Marsh Run watershed.

Rocky Marsh Run also drains to the Potomac River. Voting no on ordinance #2017-302 will preserve downstream water quality and help ensure that the Potomac River remains usable for Maryland residents.

Air pollution poses another risk to Maryland residents. The type of industry that ordinance #2017-302 would allow would generate air pollutants like fine particulate matter. According to the US EPA, fine particulates can travel 100s of miles from its original source. Air pollution related to industrial activity in Ranson could easily reach Maryland. Fine particulates have a greater affinity for carrying toxic compounds and their small size allows them to be inhaled more deeply into the lungs. Chronic exposure to fine particulate matter is associated with increased risk of several diseases including Alzheimer's in adults. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease among others. Fine particulate matter also exacerbates regional haze which creates a visible reminder of air pollution. The psychological effects that arise from an increased perception of pollution include stress, anxiety, and unhappiness. Voting no on ordinance #2017-302 will help prevent increased air pollution from negatively affecting the long-term health of Maryland residents.

The industry that this zoning will provide for will threaten the health, safety, and welfare of the residents in Maryland, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this, the council must not approve this proposed zoning change.

I again request that you vote no on ordinance #2017-302. Zoning decisions in Ranson and Jefferson County have an undeniable influence on the quality of life in neighboring states.

Sincerely,

Mark Long

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Angela Ross

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

SAMUEL WIGHT

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on ordinance #2017-302. The type of industry that this ordinance would allow in Ranson would negatively affect tourism, economic agility, groundwater quality, and individual health in neighboring municipalities like Shepherdstown. In doing these things the industry that this zoning change provides for will adversely affect the health, safety, and welfare of our community.

Tourism is critically important to Shepherdstown's economy and to the county as a whole. In 2018, tourist spending in the Jefferson County contributed over \$170 million to state and local government revenue and \$213 million in individual earnings. Importantly, most of this money comes from tourists visiting from neighboring states like Virginia, Maryland, and Washington D.C. Out-of-state tourists are largely drawn to Jefferson County because of its reputation for environmental-friendly, sustainable industry. Key elements that support this reputation include the county's pastoral scenery and pristine natural resources. Ordinance #2017-302 will allow industry into Jefferson County that risks harming these elements and dramatically reducing the area's appeal to visitors. The resulting harm to our tourist industry would drive away visitors and decrease state, county, and local revenue. The long-term success of Jefferson County's tourism industry is dependent on local governments making coordinated zoning decisions. Allowing certain types in industry in Ranson will negatively affect tourism in every municipality throughout the county, including Shepherdstown. Voting no on ordinance #2017-302 will protect the foundations of the county's tourism industry and protect the 7,040 jobs in Jefferson County that are directly supported by tourism. In this way, the industry this zoning change will allow will adversely affect the welfare of our community.

The type of large, consolidated industry that ordinance #2017-302 would allow in Ranson would generally reduce the flexibility of local economies in Jefferson County. Historically, the driving industries in Jefferson County have been tourism, agriculture, and the equine industries. These three industries are large conglomerates of small businesses. Small business is very important

to Shepherdstown. Small businesses have been shown to create more jobs, cultivate more innovation, and provide more opportunities than big, non-local firms. Additionally, small businesses have been shown to be more reactive to sudden changes relative to manufacturing businesses. Bringing large, manufacturing-based industry into Jefferson county will depress the local economy and stifle innovation. During this time of economic upheaval and uncertainty, Jefferson County needs to support industries that will allow local economies to adapt and recover as fast as possible.

Voting no on ordinance #2017-302 will help protect water resources throughout Jefferson County. The type of industry that ordinance #2017-302 would allow puts the ground resources of Jefferson county at significant risk due to the karst hydrogeology. The site in Ranson is in the Rocky Marsh Run watershed, which is in the source water protection zone for Shepherdstown and drains to the Potomac River. Therefore, activity at this site will affect both groundwater and surface water streams. In municipalities like Shepherdstown, many residents and nearby farms depend on wells for water. Contamination of groundwater aquifers would create both health and remediation concerns for local residents. Dye tests performed by the USGS near the area of proposed rezoning in Ranson have shown just how far-reaching groundwater contamination at the Ranson site could be. Results from the USGS study revealed measurable dye concentrations in Elk's Run, Rattlesnake Run, and even the Shepherdstown Town Run. This last run cuts through the center of Shepherdstown and is a favorite area for children to play and learn to fish. In this way, the industry that this zoning change will allow will adversely affect the safety of our community.

Groundwater pollution is not the only concern for communities like Shepherdstown. The type of industry that ordinance #2017-302 would allow in Ranson would also generate air pollutants like fine particulate matter, ozone, and sulfur dioxide. These pollutants are particularly harmful to children. Children exposed to air pollution have an increased risk of developing asthma, cancer, diabetes, mental health issues, and cardiovascular disease. The site in Ranson is across the road from an elementary school and also within the Jefferson High Middle district. Voting no on ordinance #2017-302 will prevent air pollution from negatively affecting the long-term health of children in Shepherdstown and all of Jefferson County. In this way, the industry that this zoning change will provide for will adversely affect the health of our community.

I again request that you vote no on ordinance #2017-302. This zoning change will allow industry that will adversely affect the health, safety, and welfare of our community. The long-term economic, environmental, and community health of municipalities like Shepherdstown depend on Ranson's participation in a coordinated zoning plan for all of Jefferson County.

Sincerely,

Jeremy Billmyer

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City and will have a very negative impact on tourism -- which has been so important to the economy of this region.

Average of \$178 million in state and local government revenue per year
\$213.7 million in individual earnings from tourism per year in Jefferson County
\$842.6 million in direct spending from tourism in Jefferson County

I have a very personal reason to ask for your NO vote on this ordinance: After purchasing land here, for the past 8 years I and others have worked very hard to envision and then create a village for seniors in this region, specifically choosing this area because of its bucolic nature and access to healthy lifestyle choices (local foods, recreation, arts, etc). Our village is now built and populated (totaling 50 homes, including the sister community). People who moved here are now deeply alarmed by the surprise decision to build Rockwool and the opening of doors to heavy industry. People are smart enough to see through the familiar promises of "no harm" that such industries always offer. Historic track records clearly show these promises to be insincere. People get hurt, time and time again. Pollution, serious effects on air quality, water, noise, safety.

Well, it's past time to stop making these mistakes over and over again.
I deeply grieve how the building of Rockwool stands to seriously damage our village and the lives of people here who came under what they now see as false assumptions about this region.

Please do not make this mistake again.
You lose far more than you gain. And we lose.

You can read all the very well-studied and articulated facts from others more educated than me. But I know what's happening here at a personal level and happening to people I care about. Seniors, as we have seen in this covid-19 era, are more vulnerable. I am one. Please care about us, too. Please think beyond the false promises and slanted "facts" you have received from Rockwool and the business people who think they will gain from this kind of industry. Please truly listen to all the people who are trying to support you with information to make a better decision.

Sincerely,

Charlotte Baker-Shenk

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

nicola larsen

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully request that you vote no on #2017-302. The air emissions, possibility of ground and surface water contamination, and their effect on our interwoven economies threaten the health, safety and welfare of not just Jefferson County but the greater region, including Loudoun and the greater Northern Virginia area.

This zoning would provide for industry that produces large amounts of air emissions. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. Northern Virginia is directly downwind from these emissions. Much of the gaseous, fine particulate, and hazardous emissions can reach Northern Virginia. Further affecting the outdoor air quality of the adjacent portion of Virginia and the ability of these areas to achieve and maintain National Ambient Air Quality Standards (NAAQS) attainment. This will affect agriculture and outdoor leisure and recreation.

For example, Loudoun County has been in nonattainment for the NAAQS 8-hour Ozone standard for the past two years. VOC and NO_x react after they have been emitted to produce ground level ozone. The industry that this rezoning would provide for would produce large amounts of these emissions. This would make it even harder as Loudoun County tries to achieve attainment. As time goes on and the scientific research advances our knowledge and understanding of the extent to which gaseous, particulate and hazardous emissions affect human health the NAAQS standards are likely to be reduced. The effects on air emission from this rezoning will make it only harder for Loudoun and Northern Virginia to meet these standards.

In addition to the concerns about the air, the possible ground and surface water contamination is very concerning to Loudoun and Virginia residents. The site is known to have ground water that is vulnerable to contamination due to the karst hydrogeology. A USGS study demonstrated that the ground water adjacent to the site to be rezoned communicates readily with surface

water tributaries of the Potomac River. In addition to direct infiltration where water moves directly from the surface to groundwater via porous limestone bedrock, karst is known to have severe ground instability problems. This makes karst geology prone to sinkhole development. Sinkholes provide direct connection between the surface water and any contaminants it may contain and the groundwater. This makes the aquifer vulnerability in karst areas very high, and contamination with industrial activity such as that provided for by this rezoning too likely. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Loudoun sources its drinking water from the Potomac River, downstream of many West Virginia tributaries that carry water from the epikarst and groundwater aquifer at the site to be rezoned. Loudoun has recently completed the new Trap Rock Water Treatment facility, which draws water from the Potomac River. Loudoun currently provides 40 million gallons and projects to provide 90 million gallons of drinking water a day to customers by 2040 (Loudounwater.org). Therefore, the viability of the Potomac River is a high priority for Virginia residents.

Loudoun and Northern Virginia is one of the fastest growing communities in the country and provides a lot to Jefferson County in their symbiotic relationship. Virginia residents support and enjoy Jefferson County through tourism, as our residents enjoy the natural and historical resources of your county. Virginia residents and businesses support the equine industry in a multitude of ways from providing wagering fans at the races to the Virginia Breeders Association Virginia Certified incentive programs and a strong market for retired racehorses. According to an economic impact study from WVU, at least 40% of Jefferson County residents travel outside of West Virginia for work, a good percentage of those travel to northern Virginia. This rezoning would allow for industry that would negatively affect the economy of both places and this relationship and the benefits for our residents gleaned from it.

This zoning change will provide for industry that will negatively effect the health safety and welfare of the Loudoun and Northern Virginia community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Jaime Franks

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

This zoning change will provide for industry that will negatively affect the agriculture industry in Jefferson County and beyond. The combination of the air emissions and threat to the ground water resources could have devastating consequences for the agricultural community of Jefferson County.

The comprehensive plan of Ranson is clear: it states, "the City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community." This land is ill-suited for an industrial facility due to its location and hydrogeology. Further, the industry that this zoning change will allow for will adversely affect the health, safety, and welfare of the community through its affect on the agricultural industry.

The agriculture industry in Jefferson County is hundreds of years old and continues to serve our community well today. According to the economic impact study "A Shared Agenda for Growing West Virginia's Agricultural Economy, Prepared by Fourth Economy for West Virginia Department Of Agriculture West Virginia University Extension Service 2012," Jefferson County is the second highest producing county for crops sales, third highest for fruits and vegetables sales, and in the top 9 counties for sales of animals and animal products.

Agriculture, tourism and the equine industries work synergistically to have an outsized positive impact on the economy in Ranson and Jefferson County as a whole. Agriculture drives tourism by creating agro-tourism opportunities, preserving beautiful open spaces that contribute to the

bucolic nature of our county, and providing the locally produced agriculture goods many tourists are look for in our markets and restaurants. Agriculture also supports the equine industry by providing local products like hay and straw, helping maintain pasture land, co-supporting local dual-purpose retail stores, and helping recycle by products. Agriculture helps maintain the way of life that many those who choose to live in Jefferson County enjoy. Industrial manufacturing and industry this zoning will provide for could never achieve these things.

Local agriculture also provides a source of locally produced agricultural goods. It has become apparent with the current pandemic and health emergency. This became a supply chain crisis because as our supply chains have moved to be ever more lean and efficient they lack resiliency and agility. By having a local source of agricultural goods and food we add resiliency and agility into our own economy and community. The agricultural industry in Jefferson County provides this.

A plethora of scientific studies have shown that a variety of air pollutants produced by the type of industry this zoning change would provide for causes decreased yields of both quantity and quality for several of the crops important to Jefferson County including winter wheat and soybeans. Soybeans and wheat are two of the crops significantly affected and two of the most prevalent crops in Jefferson County. Lower crop yields harm the farms and all the members of the down stream supply chain as well as the consumer. In this way, this zoning change will adversely affect the welfare of the community.

Recent studies have shown that even small increases in air pollution affect the productivity of agricultural workers. Similar to the reduction in crop yield this will negatively affect the individual workers, businesses, consumers and industry as a whole. In this way, this zoning change will adversely affect the health and welfare of individuals and the community.

Even more devastating is the possibility of groundwater contamination. The land at the subject location has karst hydrogeology and as such has porous bedrock and severe ground instability problems. The porous bedrock allows rapid diffuse infiltration of surface water into ground water and the severe ground instability problems leads to sinkhole development. Sinkholes provide direct connection of the surface water with the ground water aquifer through point infiltration. In fact, according to a 2012 study by Doctor and Doctor, the subject location and that of Terrapins Neck have the highest sinkhole vulnerability of any sites in Jefferson County. The propensity and easy of diffuse and point infiltration in areas of karst hydrogeology give them very high aquifer vulnerability meaning the aquifer is very vulnerable to contamination. For this reason, this measure has been used for decades by policymakers to set land use regulations. In this way, this zoning change and the industry it will provide for will adversely affect the welfare of the community.

The WVDEP recognizes development in car karst areas puts water resources high-risk for contamination but also recognizes that this is best protected against true local land use and zoning ordinances. WVDEP's guiding document Stormwater Management Design in Karst Areas

states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This document also references the Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed. In which it states "...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." Land use policy in Ranson and zoning need to take aquifer vulnerability into consideration as these agencies and documents suggest.

The Jefferson Orchards Voluntary Remediation Plan application reports that the ground water is only 60 feet from the surface at the site. It is described in the scientific literature that this land is an upland plane with large amounts of water in the epikarst, and contamination of this water effects the whole aquifer including the communications with surface water streams. A USGS study demonstrated that the groundwater adjacent to the site communicates readily with several surface water structures and wells miles away from the site. The effects of contamination at this site would go well beyond Ranson fouling large portions of the ground water and surface water in Jefferson County.

Groundwater contamination at the site would have devastating effects on the Agricultural industry in Jefferson county. For geographic and economic reasons it is simply infeasible for the agricultural industry to rely on utility provided water. Based on the scientific literature the site being considered for rezoning is one of the areas of highest aquifer vulnerability in Jefferson County and is inappropriate for the industry that this zoning change will provide for. This land is clearly ill-suited for industrial use and should not be zoned for it.

By threatening the local agricultural industry, the industry that this zoning will provide for will threaten the health, safety, and welfare of the community, and this land is not well-suited for industrial use. The Comprehensive Plan in Ranson is clear the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." To achieve this the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

RHONDA MILLER

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Developers building a controversial manufacturing plant were cited by state regulators for violating environmental rules during construction.

Rockwool, a Danish company building the coal and gas-fired manufacturing plant in Jefferson County, received the Notice of Violation from the West Virginia Department of Environmental Protection following an inspection on Sept. 11.

The violation notice was the result of an inspection at the construction site when a state inspector noted a sinkhole. In the violation notice, the inspector wrote that Rockwool had violated terms of its water pollution control permit by failing to implement controls or report “noncompliance, which may have endangered health or the environment” to the DEP’s spill line, among other things.

Rockwool received the Notice of Violation on Oct. 5, said Michael Zarin, vice president for group communications at Rockwool.

At there Mississippi site, they were cited for erecting a building that could emit air contaminants with proper permitting. Rockwell's leadership was dismissive of this citation as they felt it was simply an administrative oversight on their part and disagreed that the storage silo represented a source of air contaminate in their opinion.

The signs are already there that they have no intention of observing guidelines.

Sincerely,

Steven Harrison

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous esteves and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Patricia Nichols

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

Monica Ledford

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

David Ward

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

This land and this location are not appropriate for the industry this zoning change will allow. The hydrogeology of the land combined with such industrial activity risks the safety of our water supply. The air emissions from this industry will negatively impact our physical and mental health, our children's ability to achieve, our ability to make a living, our happiness, and it will do this for generations even after we leave or the pollution stops. The industry this zoning change will provide for will adversely affect the health, safety, and welfare of our community. It is not lost on us that this zoning change is being made next to our neighborhood and not next to the residents of Ranson, yet Ranson is in control. This is not right. We respectfully ask you to vote NO on ordinance #2017-302.

The land at the site in question is not just ill-suited, but completely inappropriate for the industry this zoning change will allow. This land has karst hydrogeology. As such, the ground itself is very unstable and readily develops sinkholes. This land has been described by a 2012 study to be exceptionally susceptible to sinkhole formation, more so than most of the rest of the county. Sinkholes provide point infiltration of surface water into the water in the epikarst. The porous bedrock allows diffuse infiltration of surface water into the epikarst water. At this site, there is also large amounts of water in the epikarst and it is only 60 feet from the surface. This allows the water at the surface to easily communicate with the water in the epikarst and the groundwater aquifer carrying any surface water contaminants with it.

The industrial activity this zoning change will allow for will cause ample surface water contamination from ground level industrial activities, raw material and waste storage and particulate matter falling to the ground from the air emissions. The industry that is currently planning to utilize this zoning change should be designated a stormwater hotspot just for this reason. The WVDEP should require them to treat all water before it is allowed to infiltrate the ground, but so far, this has not been done. The WVDEP actually recommends that areas like this not be developed due to the risk to groundwater. Their guiding document, Stormwater

Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that the best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." This guidance should be followed; clearly we cannot expect the DEP to protect us from inappropriate zoning changes. Mr. Stranko indicated that the council should not take environmental issue into consideration when zoning. However, it is clear that the DEP is imploring local governments to take the hydrogeology and in particular karst into consideration when zoning.

The wellhead protection area for the Fox Glen's well and that of the elementary school where our children go to school intersects with the land where the zoning change is being proposed. However, a USGS study has shown that the groundwater aquifer here moves relatively fast and so contamination throughout this property is a concern for our water quality. This zoning change will clearly endanger the safety of our water supply. If the well at Fox Glen is contaminated and the utility is forced to divert water from further away, this may be used as evidence at the Public Service Commission to raise the water tariff on Fox Glen residents. This is an increase many will not be able to afford, raising the risk of water insecurity. Through this effect on the water supply the industry this zoning change will provide for will adversely affect the safety and welfare of our community.

The air emissions that will be produced by the industry that this zoning will allow include gaseous (SO₂, NO₂, O₃ (VOC and NO_x)), particulate matter (PM₁₀, PM_{2.5}, PM_{0.1}), and hazardous emissions (neurotoxins and carcinogens). We will be exposed through our lungs from the air we breathe, through our skin from the air and things we contact, and through contaminated things we may ingest. Our kids will be more exposed because they spend more time playing outside and on the ground and kids like to put things in their mouth. In fact, according to the National Academy of Science, our kids are more at risk because they breathe more air per pound than adults, their detoxification pathways are less mature, they are growing and developing and these processes are more sensitive, and they have more years to live yet and thus more years to develop slow onset diseases. Exposure to air pollution in early human development, especially exposure to fine particulate pollution, can be extremely deleterious to children's health and development.

The negative effects start in utero. Embryonic and fetal cells are exquisitely sensitive and are affected directly by inhaled pollutants that across the placenta like fine particulate matter as well as other secondary pathways causing impaired organ development, disturbed development of the immune system, premature birth, lower birth weight, and increased infant mortality. These early changes lead to long-term effects including increased disease development in multiple organ systems throughout life, cognitive defects, achievement deficits, and negative psychological social and economic effects.

Fetal and early life exposure to air pollution causes inappropriate brain growth and maturation in early life, neurodevelopmental disorders, early cognitive deficits, and has been associated

with autism by several case-control studies. Several studies have demonstrated a scholastic deficit in exposed children for almost all subject matter and at a variety of grade levels. The cause of these findings are multifactorial and researchers suggested they include exacerbation of asthma symptoms, other decreased health parameters, increased fatigue, increased absence, or a direct neurodegenerative effect, all caused by or contributed to by the exposure to air pollution.

Development of the respiratory system starts in utero, is 80% complete by age 6, and continues to early 20s. A review by Korten et. al. in 2017 explained that exposure to air pollution during the first 6 years of life can damage the lung tissue, impair lung growth, and alter the development of immune function and repair mechanisms within the lungs. These effects increase both short- and long-term risk for asthma, chronic obstructive pulmonary disease (COPD), lung cancer, and respiratory infections. Exposure to outdoor air pollution not only increased the risk of these diseases, but exacerbates existing disease increasing severity of symptoms, hospital visits, and death due to these diseases. A 2019 study found “even within the limits set by the World Health Organization, the pollutants PM10, SO2, NO2, and O3 are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” It is important to note that the US limits are set higher than the WHO, 300% higher in the case of PM10!

There are a multitude of other physiologic effects of air pollution that cause increased rates of morbidity and mortality in both adults and children. Air pollutants are associated with increased risk of autoimmune diseases like asthma, allergies, and eczema. Air pollution has deleterious effects on the cardiovascular system, endocrine system and blood, contributing to the occurrence of high blood pressure, high cholesterol, obesity, anemia, and stroke.

There are psychological effects as well. A review, of 178 published articles by Lu published in 2020, systematically examined the psychological (affective, cognitive, behavioral), economic, and social effects of air pollution and found: “Affectively, air pollution decreases happiness and life satisfaction, and increases annoyance, anxiety, mental disorders, self-harm, and suicide. Cognitively, it impairs cognitive functioning and decision making. Behaviorally, air pollution triggers avoidance behavior, defensive expenditure, and migration as coping strategies. Economically, it hurts work productivity and stock markets. Socially, it exacerbates criminal activities and worsens perception of the government. Importantly, both actual and perceived air pollution levels matter.”

Through negative physical and mental health effects air pollution has been shown to decrease an individual’s productivity and ability to participate in the workforce, negatively impacting workforce availability and overall productivity. This negatively impacts individual workers, companies, and the local economy. It also decreases individual’s ability to relocate themselves or their family into an area less affected by pollution. In this way a vicious cycle is set up where successive generations are exposed to the same pollutants and experience the negative effects of the ongoing exposure to pollution. This is not a fate the children of Fox Glen deserve to have thrust upon them by this zoning change and the industry that it will allow into our bucolic

county. An editorial in the New England Journal of Medicine, commenting on several recent studies, stated: "The best control strategy from the standpoint of human health, supported by the scientific evidence to date, is to reduce the levels of all types of air pollutants. Our children's health depends on it." Clearly the industry that this zoning change will provide for will negatively effect the health, safety, and welfare of our community.

The area surrounding the location, of the proposed zoning change that will accommodate heavier types of industry, is historically lower income and underserved. Deciding to locate a tract of such zoning in this location when is it on the whole unwanted and totally inappropriate for the land and surroundings is an example of environmental injustice. The Lancet Commission on Pollution and Health, citing the United Nation's Universal Declaration of 1948 on Human Rights, found that "pollution threatens fundamental human rights - the right to life, the right to health, the right to well-being, and the rights of the child." This rezoning represents not only a bygone era of economic development but a bygone era of environmental injustice and human rights violation.

The Lancet Commission on Pollution and Health further found that prevention of non-communicable diseases will require pollution prevention and that this will require fundamental changes in societal patterns of production, consumption, and transportation. This will require a paradigm shift to a more sustainable economic model based on recognition of human rights. They also found this is a major unexploited opportunity in society that many communities are grappling with undertaking. The movement away from the smart code zoning, with it integrated walkable communities, to large tracts of land dedicated to polluting industry close to a title one school is the exact opposite of this. This rezoning would represent a major step in the wrong direction for disease prevention, human rights, Ranson, and Jefferson County!

This change in zoning is not appropriate for this land and this area. This land itself is not well suited for the industry this zoning change would allow. This industry would severely adversely affect the health, safety and welfare of our community. Please vote NO on the Ordinance #2017-302.

This is right across from my home! I don't want this there. Please vote NO!

Sincerely,

Rhonda Davis

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask that you vote no on Ordinance #2017-302. While not in Ranson, the land and homes around the property that is the subject of the zoning change are closer to the property than anyone who currently lives within the city limits of Ranson. This area will be affected sooner and more harshly by the environmental issues that will develop secondary to the inappropriate siting of industry this zoning would allow.

The subject land has been well studied by Drs. Kozar, Doctor and Doctor and described in the scientific literature and USGS reports as having karst hydrology with very high aquifer vulnerability. The karst landscape is a consequence of the presence of soluble bedrock, which consists of limestone in the case of the subject land. In such landscapes water percolates through the ground and dissolves the underlying rock creating a porous network of caverns and throughways. Karst aquifers are known to be "extremely vulnerable to pollution" due to direct connection between the surface water and groundwater through both point (sinkholes) and diffuse (everywhere) infiltration. It is known from the Voluntary Remediation Plan of Jefferson Orchard that the groundwater at the subject site is only 60 feet below the ground. The subject property and much of the property around it are on an upland plain with few surface streams, but great seasonal variability in the water table resulting in numerous estavelles and large amounts of water in the epikarst. This water is easily contaminated and this contamination spreads quickly throughout the aquifer. Dye tests performed near the subject site by the USGS have demonstrated this quick moving thorough dispersment in the aquifer in this area. While this contamination goes on to affect springs at the margins of the upland area continuing on in streams that service municipal water sources and the Potomac River, our concerns are far more immediate in both time and distance. Well water is the only water source available in the area of the proposed zoning change and, with the exception of Fox Glen, a majority of this water is supplied by private wells. Therefore, the groundwater aquifer fulfills a critical necessity, fulfilling all needs including human consumption, household uses, and agriculture and

maintenance of livestock and horses in the immediate area around the site. The concern is that if the aquifer becomes contaminated, then the local drinking water will be fouled.

For decades now, policy makers have been using “Aquifer Vulnerability,” to set land use and water resource protection policy. Karst has very high Aquifer Vulnerability. Therefore, this industrial use is not appropriate for this land and it should not be zoned for it. The guiding documents of the WVDEP recognize this. The introduction to the WVDEP document Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.”

The Chesapeake Bay Stormwater Network karst stormwater guidance document the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed, which the WVDEP cites in its own guiding document Stormwater Management Design in Karst Areas, clearly agrees stating:

“First, the effect of land development on karst terrain is complex and hard to predict, and requires professional analysis to reduce the risk of geological hazards, damage to infrastructure and groundwater contamination.” “The working group acknowledges that past approaches to stormwater and land development in karst terrain have been inadequate to safeguard the public and the environment.” “...there is always some inherent risk when development occurs on this sensitive terrain. Consequently, the best local approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” We clearly need stronger comprehensive land use plans and zoning that direct new growth away from karst areas to more appropriate locations. Ordinance #2017-302 is literally the opposite of this.

Further, we cannot rely on the WVDEP to do the job that good local land use guidelines and zoning should do. For example, the CSN Technical Bulletin no. 1, Stormwater design guidelines for karst terrain in the Chesapeake Bay watershed states that detention and retention ponds are not recommended on karst and categorize them as discouraged. Also, quoting WVDEP’s own karst guidance: “attenuating surface runoff will increase the rate of sinkhole formation and potential groundwater contamination.” Yet the entity currently planning to utilize this zoning change is planning employment of multiple massive retention ponds and attenuating surface runoff completely. This has already been approved by the DEP in two Construction Stormwater General Permit registrations for that company. One of detention ponds is not even regulated by the DEP as it contains process water and has no outlet. Clearly the DEP recognizes the risks but is not appropriately limiting them. Relying on the DEP to protect the public health, safety, welfare, and the environment from any entity in these karst locations is simply as the CNS bulletin said it “inadequate to safeguard the public and the environment.” We must have appropriate zoning that takes into consideration appropriate use of land with karst hydrogeology. Ordinance #2017-302 does not do this, but instead increases the risk to the public and the environment.

A second serious concern is the air emissions from the industry that this zoning will provide for. These emissions include gaseous NO₂, O₃ (VOC and NO_x), and (SO₂), particulate (PM₁₀, PM_{2.5}, PM_{0.1}), and other hazardous emissions. These types of air emissions have been shown to increase the risk of, contribute to, and exacerbate a multitude of developmental, physical, physiological, physiological, cognitive and economic. The exposure of one individual can cause repercussions in multiple generations. Embryos, fetuses, and children are most vulnerable with effects born out over a lifetime, and that of their offspring. Many of these effects only require short-term exposure and some have even been shown to occur at levels below current limits recommended by the World Health Organization. One example of this is that a recent study found that “Even within the limits set by the World Health Organization, the pollutants PM₁₀, SO₂, NO₂, and O₃ are associated with increased risk of treatment for respiratory diseases in children 0 to 6 years of age.” Unfortunately, the US limits are higher than WHO, 300 % higher in the case of PM₁₀!

In fact, in 2019, in the Advice from the Independent Particulate Matter Review Panel (formerly U.S. EPA Clean Air Scientific Advisory Committee Particulate Matter Review Panel) on EPA’s Policy Assessment for the Review of the National Ambient Air Quality Standards for Particulate Matter, it stated that the committee unanimously and unequivocally found that the current primary annual and 24-hour PM_{2.5} National Ambient Air Quality Standards (NAAQS) are not adequate to protect public health. The advice from this 20-member committee, whose scientific disciplines include epidemiology, medicine, toxicology, air quality measurement, air quality modeling, exposure assessment measurement and modeling, risk assessment, statistics, and others, was ignored due presumably to political pressure. Not only are the NAAQS too high in some cases, but due to the measure and mechanism by which they work, they can not replace the safety provided by good land use and zoning regulations, that are meant to do things like keep factories with air emissions and hundreds of heavy trucks away from elementary schools. In fact, there is a state law that prohibits siting a school near a factory. Unfortunately, the reciprocal law does not exist. Clearly, just like with the water resources, we cannot rely on the DEP or the EPA to do the job of what appropriate zoning should do. The whole point of zoning is to keep people safe and provide for their health and welfare. Ordinance #2017-302 puts families and school children directly in harms way.

The air emissions, threat to the groundwater, and the very presence of the industry that this zoning change will allow for will have a serious negative economic effect on those who live and or work closest to the site in question. Productivity and workforce participation will be negatively affected by the health effects of the air emissions. The local agricultural operations will be negatively affected by the air emissions with lower quantity and quality of crop yield and would be devastated if the ground water aquifer were fouled. The equine operations in the area, of which there are several, will be negatively affected by the air emissions as they affect the horses’ health and performance. The mere presence of the industry that will be provided for by this zoning change will cause property values to fall. There will be serious economic consequences for the immediate area around the site in question.

Several of the communities in the immediate area of the site for proposed zoning change are traditionally underserved and have lower economic status. The choice of this location for such a zoning change represents an egregious example of environmental injustice that should not be promulgated or tolerated.

This zoning change will provide for industry that will negatively affect the health safety and welfare of our community. The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” To achieve this, the council must not approve this proposed zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Georgia Ricketts

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Aaron Renner

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on Ordinance #2017-302. Ranson's proposed zoning change presents a significant risk to the equine industry in Jefferson County and well beyond. The type of industry that would be allowed by the proposed zoning change in this location would jeopardize horse health, the ground water supply, and workforce productivity. This will cause immediate shrinkage and threaten the long-term viability of the equine industry in the county. In doing so, the industry this zoning change will allow for will adversely affect the health, safety, and welfare of our community.

The site of the proposed rezoning is less than six miles from Charles Town Races, with several breeding, training, and rehabilitation facilities between the two. The industry allowed by this rezoning would produce particulate, gaseous, and hazardous air emissions that would reach these sites. According to the WVDEP air permit, the Rockwool plant in Ranson is permitted to emit 250.87 tons of particulate matter per year into the air (1).

According to a recent study published in the journal of Veterinary Internal Medicine (2), horses are 15 times more sensitive to inhaled particulate matter than humans. Inhaled particulate matter can cause inflammation in horses' lungs that negatively affects performance. Inhaled particulate matter also contributes to the development of inflammatory airway disease (IAD) (3). IAD is a chronic airway disease that can affect horses long after their racing career is over. While there is little research on how other air pollutants affect horses, the effects of pollution on humans can be used to infer potential impact on horses. However unlike human models, these horses are elite athletes continuously exposed, and will thus likely experience detrimental effects at much lower levels of air pollution than humans.

The primary concern with air pollution is that increased levels of pollutants will increase inflammation in horses' lungs. Even small, subclinical amounts of inflammation in the lungs of horses negatively affect performance (2,3,4,5,6,11). This inflammation can also cause increased

recovery times following racing (7,11). Reduced performance and training interruptions can lead to higher risk of injury, reduced winning average, fewer yearly starts, lower yearly earnings, shortened career length, fewer lifetime starts, reduced lifetime earnings, and reduced quality of life (2,3,8,9,11). Each of these situations will lead to decreased return on investment, decreased cash flow, and decreased overall earnings for owners, trainers, and breeders with horses at Charles Town Races and in nearby areas. In this way, the industry this zoning will allow will adversely affect the welfare of our community.

While racing is usually a thoroughbred's first career, it is rarely their last. Some racing horses go on to be breeding stock, while others will have successful careers as sport horses. Jefferson County is an important source of new stock for sport horse trainers from Northern Virginia, and Maryland, and this is a resource for local horseman of both income and placement for horses not appropriate for breeding. However, if retired racehorses are unsound from injury or respiratory disease, they can be difficult to manage as breeding stock or unfit for a career as a sport horse. This affects the horse's quality of life and also places a burden on the industry locally and regionally. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

The perception of decreased air quality from the increase in regional haze and visible smokestacks as one drives into the county will deter out of state Owners and Breeders from investing in West Virginia bred Race horses, decreasing or eliminating a critical \$50 million a year source of local business volume. In this way, the industry this zoning will provide for will adversely affect the welfare of our community.

Another concern related to the proposed rezoning in Ranson is the risk of groundwater contamination as a result of the karst hydrogeology at the site and the industrial activity. Horsemen will either have to take on the expense of periodically testing water sources or they may not know local ground water is contaminated until their animals are sick. Veterinary care and testing adds expense and uncertainty to an industry that already deals with large inherent risks. The actual occurrence of ground water contamination would be devastating for Jefferson County's equine industry. For both geographic and financial reasons, it is simply impossible to think that the industry could solely use public or private utility-provided water if industrial activity fouled the local groundwater. In this way, the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

Finally, studies on US agricultural workers have demonstrated that increased air pollution decreases productivity of outdoors workers. This would place an additional burden on workers, small business owners and the industry. In this way the industry this zoning will provide for will adversely affect the health, safety, and welfare of our community.

The equine industry in Jefferson County is hundreds of years old. It is not worth risking this historic and economically valuable industry by rezoning for industrial companies like Rockwool. An economic impact study of the Charles Town Thoroughbred Horse Racing Industry on Jefferson County's economy found that the spending by owners, breeders, and trainers of the

equine industry directly contributes \$79.4 million to the county each year. Out-of-state owners, breeders, and trainers spend more than \$50 million in Jefferson County every year. The value of total business volume in Jefferson County is \$191 million each year (10). These numbers do not include the effect of the handle or the casino.

The equine industry provides jobs for a broad cross-section of the public. This industry offers individuals of any educational background a variety of paths to achieve a good middle-income living. Many jobs allow individuals to pursue apprenticeships or on-the-job training rather than requiring a costly college education. This flexibility allows for greater lifetime earnings and improved educational debt-to-earnings ratio for these workers. The equine industry also provides opportunities for non-traditional workers by offering job opportunities to those who may not be employable by larger corporations. This industry provides a variety of fulltime, part-time, flexible, and pick-up work. Encouraging this type of flexible job ecosystem helps create a healthy economy with broad participation in employment and consumption.

The equine industry is a large conglomerate of small businesses, which have a multitude of economic benefits over having a few large businesses. It has been extensively reported that small locally owned businesses and start ups create more jobs, cultivate innovation, generate higher incomes, and provide more opportunities for individuals that would otherwise not exist than big non-local firms, which can actually depress local economies. The equine industry provides opportunities for small businesses and startups responsible for this growth of better jobs that are so good for the economy.

The equine industry offers so many other benefits that the industry in the rezoned area would not. For example, the equine industry supports local agriculture by providing a market for agricultural goods such as straw. The robust straw market supported by owners, trainers, and breeders allows for a third cash crop to be produced from one field in a year. Through pastureland and support of local agricultural goods, the equine industry protects and preserves the open spaces that give our county its bucolic quality and help attract tourists. Through the breeders' incentive programs, the equine industry offers unique opportunities to draft state funds back to Jefferson County, to name a few.

Rezoning this area of Ranson for Special District Industrial will allow in entities whose activities are harmful to the equine industry. The losses incurred by the equine industry would far outweigh any benefits derived from industries occupying the rezoned area. Sacrificing the long-term viability of one of our oldest and most productive industries for a net loss in business volume and economic value just does not make good sense for the local economy. This zoning change would provide for industry that would adversely affect the health, safety and welfare of our communities. Please vote NO on Ordinance #2017-302.

Sincerely,

crystal welty

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Margaret Tice

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that will significantly harm the municipalities within Jefferson County and beyond effecting the health, welfare, and safety of our community. Harpers Ferry is a national treasure with the natural and historic resources tours flock to see each year and one of the communities that will be negatively impacted by this zoning change.

According to a 2019 study by the West Virginia Tourism Office, Jefferson County generated an average of \$178 million per year in tourism-derived revenue for state and local governments over the last 10 years, more than any other county in West Virginia by at least double. Tourism benefits the businesses and economy of Ranson and Jefferson County producing \$213.7 million in individual earning, 7040 jobs, and \$842.6 million in direct spending here in 2018. We would need 40 Project Shuttles to replace the individual earnings and 59 Rockwools to replace the jobs provided by the tourism industry in Jefferson County. It is important to note that most of the money generated by tourism in Jefferson County comes from neighboring states. In this way, it is like an export: not simply recycling money, but bringing money into the state increasing its wealth. Much of the economy in Harpers Ferry is based on this tourism industry. A threat to this industry poses a threat to the economy and welfare of our community.

One of the important drivers for tourism in Harpers Ferry is the Appalachian Trail. According to the Appalachian Trail Conservancy (ATC), Harpers Ferry is the psychologic midpoint of the Trail, and hikers often plan extended stays in Jefferson County with an obvious positive impact. The ATC reports that the smokestacks and associated lights will be visible in the viewshed of 15 vistas on the Appalachian Trail (AT). Studies have shown that quality of vistas and human impact on the environment are not only noticed by visitors, but effect their experience. Another study published in the Journal of Applied Recreation Research, found that points of interests and views drew visitors' attention and had a significant impact on their perception of the trail. It was also found that particularly beautiful vistas helped visitors overlook elements

that usually have a negative effect on trail experience like increased trail traffic. A 2009 study in Leisure Sciences revealed that scenic value was a perceptual theme of Appalachian Trail visitors, and that things as simple as dead trees visible in a vista can have a negative impact on visitors' overall perception. Imagine the effect the smokestacks will have from the 15 vistas from which they will be visible. The introduction of industrial activity made possible by the proposed rezoning in Ranson would have a negative effect on the scenic views of beautiful landscapes from the Appalachian Trail in Jefferson County.

The smokestacks are not all visitors will be able to see — the air pollution will create haze. The effect of regional haze on tourists was explored in a review article published in the Atmospheric Environment titled "Impaired visibility: the air pollution people see." A key takeaway on the negative affect of haze on vacationing tourists was summarized as follows:

"Vacations offer an escape from the routine and stress of our daily lives. Vacation destinations are often chosen based on their scenery; vacations are spent gazing at monuments, mountains, clouds, and oceans. Good visibility allows clear observation of distant features and appreciation of the inherent beauty of these scenes...Air pollution, which is often present in both our cities and parks, interferes with these attributes and can ruin the views vacationers travel to enjoy."

People seek bucolic, unspoiled areas to escape the stresses of urban areas. A 2004 study in Environment and Behavior found perceived pollution causes stress while viewing natural scenes has both psychological and physiological benefits, and a 2007 study confirmed these benefits. Two other studies found that people are emotionally affected by poor visibility, and tourists are disappointed when views are obscured by haze.

The combination of smokestacks and haze will mar the viewshed and will not only reduce the positive effects of a scenic landscape but also leave tourists disappointed and dissatisfied with their choice of destination. With these effects the welfare of the Harpers Ferry community would undoubtedly be endangered by the industry that this zoning change will provide for.

Multiple studies by doctors Kozar, Doctor, and Doctor have demonstrated that the land at this site to be rezoned is Karst with the highest likelihood of sinkhole development in the county, and that the groundwater aquifer there is incredibly sensitive to contamination from surface water. Further, this site is on an upland plain with relatively few surface streams, seasonal variability in the water table that results in numerous estavelles, and large amounts of water in the epikarst. In this area contamination in surface water communicates easily to the water in the epikarst via diffuse and point infiltration, and the springs at the margins of the upland area are directly affected by the water quality throughout the aquifer. According to Jefferson Orchards Voluntary Remediation Plan with the WVDEP, the groundwater at the site is approximately 60 feet below the ground, and the tests performed by the USGS have shown that groundwater from just adjacent to this site emerged in the headwaters of both the Elk's Run and Rattlesnake Run. This is critically important for Harpers Ferry because the Elk's Run headwaters is a spring about three miles southeast of the site and goes on to become the drinking water source for Harpers Ferry and Bolivar before emptying into the Potomac River.

The headwaters of Rattlesnake Run is a spring about 3.5 miles from the site and is also a tributary of the Potomac River. The Potomac River is the back up water source for Harpers Ferry. This means that the activity at the site will have a critical influence on the drinking water of Harpers Ferry. In this was the industry permitted by this change in zoning would undoubtedly endanger the health and safety of the community in Harpers Ferry.

The untoward health effects and individual economic consequences from the pollution emissions of the industry this rezoning will allow that will be born out over the length of people's lives and that of their decedents for at least three generations is an egregious example of environmental injustice that should not be tolerated. This zoning change may be in one of the poorest sections of the county, but the effects will be felt in every part of Ranson and the county.

The Comprehensive Plan in Ranson is clear: the city has a duty to ensure that new industry will "not adversely affect the health, safety, or welfare of the community." The industry that this rezoning will allow will jeopardize the health, safety and welfare of Ranson, Harpers Ferry and the whole county. Please vote no on the ordinance #2017-302.

Sincerely,

Travis Holley

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Dominic Laiti

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

Please vote no on ordinance #2017-302. This Ordinance would allow industry in Ranson that is not aligned with the comprehensive plan of the City. The Comprehensive Plan of Ranson under General Land Use Objectives states the following:

"10. Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The City has failed to address the latter part of this objective. By changing the Special District Industrial (SDI) in the way that the City did in 2017, this designation enables industry that will endanger the health, safety, or welfare of the community. By now changing this additional land from new community to SDI, Ranson has ensured that such industry will come to fruition.

The industry that this rezoning will provide for produces significant amounts of pollution. The air pollution would include gaseous emissions, particulate matter and hazardous air pollutants. These substances are known to cause diseases affecting multiple organ systems including the neurologic, immunologic, respiratory, cardiovascular, endocrine, blood and skin. These effects are strongest during gestation and childhood as development is exquisitely sensitive during these times, but the effects are realized throughout life negatively impacting a variety of lifetime parameters including physical and mental health and economics. Many of these effects have recently been shown to occur even below the World Health Organization standards. This rezoning will undeniably endanger the health of the community.

Through a combination of its visibility in the county and the pollution it produces this industry will harm the industries that are the pillars of our economy. The air pollution endangers the health and performance of the horses in the thoroughbred racing industry ultimately decreasing return on investment, cash flow, and over all earnings for owners, breeders, and

trainers. This group provides over \$70 million in direct business volume per year in Jefferson County. The agriculture industry will experience decreased crop yield due to the air pollution and will also see decreasing return on investment, cash flow, and overall earnings. The industry new would be an eyesore visible from many locations in the county, the haze will affect visibility and view, and both will have a negative effect on perceived sustainability to tourists. These effects will cause decreased visitors and again decrease return on investment, cash flow, and overall earnings for the hundreds of small businesses that make up the tourism industry. In these ways, the presence of the industry this zoning change will allow will have a substantial negative effect on the economy of Ranson and the County, and will undeniably endanger the welfare of the community.

The hydrogeology at the location is completely inappropriate for the type of industry this rezoning will allow. Due to the mature karst hydrogeology at the location, there is a high level of aquifer vulnerability. Pollution that has fallen to or is present on the ground, will be carried by surface water into the groundwater aquifer via diffuse and point infiltration. Even the engineering company hired by Thrasher engineering for Rockwool warned that it was impossible to eliminate the risk of sinkhole development and groundwater contamination. This is precisely why the guiding documents of the DEP recommend strong zoning and land-use regulations from local government to prevent development of karst areas. Because of the characteristics of the karst aquifer in this location, contamination of the groundwater here would affect the drinking water of the great majority of Jefferson County. This rezoning will undeniably endanger the safety of the community.

The Comprehensive Plan as quoted above states, “the City will designate ample land that is well-suited for industrial facilities.” Due to the hydrogeology, this land is not well-suited for industrial facilities as would be allowed by the Special District Industrial. Respectfully, Mr. Stranko is incorrect in his assertion that the council is not allowed to take the environment into consideration in zoning decisions, as it is the purview of the DEP. In fact, the DEP implores local governments to do just that in its guiding documents on stormwater design in karst. The DEP Stormwater Management Design in Karst Areas states, “it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations.” Clearly, the DEP is encouraging local governments to use zoning to steer development like this away from karst land. This karst area is inappropriate and ill-suited for this use and it should not be zoned for it.

The Comprehensive Plan is clear: the city has a duty to ensure that new industry will “not adversely affect the health, safety, or welfare of the community.” This zoning change would clearly adversely affect the health, safety, and welfare of the community. The Comprehensive Plan further states, “the City will designate ample land that is well-suited for industrial facilities.” This land is clearly ill-suited for industrial use and should not be zoned for it. Therefore, the council should vote no on the zoning change. Please vote no on the ordinance #2017-302.

Sincerely,

Dominic Laiti

Subject: Written Public Comment for hearing on #2017-302

Dear Ms. Pfaltzgraff:

Re: #2017-302: "AN ORDINANCE AMENDING AND RE-ENACTING THE OFFICIAL ZONING MAP OF THE CITY OF RANSON PURSUANT TO RANSON MUNICIPAL CODE § 19-20 AND CHAPTER 19A, ARTICLE 1: 'JEFFERSON ORCHARDS' REALLOCATING TRANSECT DISTRICTS (DISTRICT 8, TAX MAP 12, PARCEL 1)"

I respectfully ask you to vote NO on Ordinance #2017-302. The industry this zoning change will allow for endangers the health, safety and, welfare of the community, and violates the premise of the smart code zoning that we have spent so much time, effort and federal money employing.

Any change in zoning needs to align with the comprehensive plan. In Ranson's current comprehensive plan (2012), the city only refers to "heavy industry" in the history section. Here it is characterized as part of a bygone era that has been replaced by an emphasis on agriculture for local food production, open spaces, and quality-of-life. In the remainder of the document, the word industry is used loosely to describe businesses including flower shops and shoe stores. Nothing that resembles the industry that this zoning change will provide for is described in the current comprehensive plan of Ranson.

In the land use section of the comprehensive plan, number ten states:

"Encourage manufacturing and assembly-line facilities to locate in Ranson. The City will designate ample land that is well-suited for industrial facilities and will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community."

The comprehensive plan clearly states that the city will ensure that industrial facilities do not adversely affect the health, safety, or welfare of the community. This change in zoning clearly negatively affects the health, safety, and welfare of the community.

As the zoning is proposed, the industry that this zoning change will allow for will be directly across the street from houses, parks and other small businesses. A densely populated subdivision and an elementary school already exit directly across the street. While these latter

community sections are not in the city limits, the effect of this zoning on them should still be considered just the same as it would be if they were in the city limits.

The industry that this zoning change will provide for will produce particulate, gaseous, and hazardous air emissions. These emissions have been shown to be detrimental to human health at every stage of life from embryo to old age. In utero and childhood exposure are the most damaging with lasting effects being realized through out life, and with maternal exposure the effects can be felt for generations. Multiple organ systems are affected including respiratory, cardiovascular, neurologic, immune, and endocrine causing defects in multiple processes including in utero development, neurodevelopment, immune and tolerance development, and cognitive defects. There are also psychological, social, and economic effects from both perceived and actual air pollution in both children and adults. Many of these effects can be seen even with short-term exposure or exposure that is lower than the levels recommended by the US Environmental Protection Agency and World Health Organization. These consequences are devastating to the individual and depressing to the local community and economy. State law does not allow a school to be built next to industry that this zoning will allow but yet we are contemplating changing the zoning so this industry can build next to a school. This does not make sense. As Ranson residents, we want Ranson to follow the lead of the state and keep polluting industry away from kids. In these ways, this change in zoning will negatively affect the health and welfare of the community.

In addition to the health effects of the air emissions is the threat to groundwater from the industry that this zoning change would allow. The land in question has karst hydrogeology and therefore very high aquifer vulnerability and is not appropriate for this industry. With the type of industry this zoning will provide for, combined with high aquifer vulnerability, the likelihood of groundwater contamination is too high for the community and region to bear. A USGS study demonstrated that contamination in the groundwater adjacent to the site moves relatively quickly and can be found in wells and surface water structures in a variety of locations in the County. In this way, contamination at the site would affect the drinking water of the great majority of Jefferson County residents. Through the surface water connections, the water at the site also affects the water resources of the region.

Aquifer vulnerability has been used by policy makers for decades to set land use regulations. The guiding document, from the WVDEP, Stormwater Management Design in Karst Areas states, "it is important to note that the potential for geological hazards, damage to infrastructure, and groundwater contamination is an ongoing concern when developing in these areas. And that best approach is to craft stronger comprehensive land use plans that direct new growth away from karst areas to more appropriate locations." In Ranson, we need to follow this advice and not change the zoning of this land for use by industry that has among the highest aquifer vulnerability in the County. This zoning change will endanger the safety of the community and region by endangering the safe water resources. As Ranson residents, we want to safeguard the water resources of the county and region by following the WVDEP guidance here.

Further, by reallocating this transect district and replacing it with a monolithic block of Special District Industrial designation, hundreds of housing units, parks and space for small businesses are lost. Ranson loses the potential for property tax on these properties and their improvements, Business and Occupational tax on the businesses and sales tax in retail stores. The community loses out on the opportunity to develop affordable housing and create locations where people can live, work, play, and shop all in the same place reducing the need for travel.

Worse yet apparently a deal has been made where the entity that owns the subject land has required that a litany of things not be built on the adjacent land essentially stripping the purpose of the smart code transect zone that exists there. Transect zones in the smart code are meant to transition, from out to in, and provide communities where people can safely work and live in close proximity in an effort to reduce travel. Excluding many of the components of the transect zone effectively eliminates the features that make it a transect zone, thus, losing the benefits a transect zone offers the community and city. By losing these benefits, reducing the overall and affordable housing prospects, and reducing so drastically the opportunities for city income, this zoning change will negatively affect the welfare of the community.

As Ranson residents, we find it odd that we are changing zoning to provide for industry that we would not put in the middle of our town close to our residents, but we are placing it close to the homes of county residents. Further, it is striking that the area where this change in zoning is directly adjacent to historically underserved lower income communities and a Title I school. This amounts to environmental injustice and cannot be tolerated.

The purpose of zoning is for a city to protect the health, welfare, morals and safety of the community. In this case, the air emissions and heavy truck traffic will endanger the communities' health. The threat of water contamination will endanger the safety of the community. The effect of lost productivity and decreased workforce participation due to increased illness and the negative effect the air emissions and presence of such a factory will have on the local economy will negatively affect the welfare of the community. The environmental injustice of changing the zoning to accommodate such polluting industry in a location where your municipality has no residents, but yet hundreds of low income and underserved county residents live is egregiously amoral. This must not happen. We respectfully implore you to do the right thing and vote no on ordinance #2017-302.

Sincerely,

Jennifer Young
Charles Town, 25414

PS Longtime Mayor Dave Hamill never would have wanted this to happen to his beloved Ranson, WV. He envisioned a beautiful mixed development of residences and small businesses.

We moved to Jefferson County, WV for the beauty and peaceful environment. If you do this, you will lose residents en masse to less polluted areas. How could you even think of this?
